

UNIT 5 ANSWERS: Check your punctuation

Life Cycle of a Bean

Beans start as seeds.

What is a seed?

A seed is part of a plant.

Where do seeds come from?

Seeds come from flowers. The seeds grow from the flowers on the bean stalks.

Why does a bean plant have seeds?

A bean plant has seeds to grow more beans.

How does a new plant grow?

A seed grows a root and then a shoot. The new plant grows leaves and then flowers.

What happens to the flowers?

The flowers turn into pods with seeds inside. The pods open and the seeds fall to the ground because they are ready to grow into new bean plants.
