Authors/Contributors

enVisionMATHS has an extensive expert author and consultancy team, including nationally and internationally recognised researchers and leading classroom teachers from across Australia.

enVisionMATHS Author Team Year 4

Jane Beams

Jane Beams taught for 20 years in Victorian Catholic, Government and Independent schools across all year levels. Following a further three years as publisher of Australian Primary Maths books and digital components for Pearson Australia, she is currently the Program Manager of Pearson Professional Learning. Jane has presented at national Mathematics conferences and she spends time visiting Maths teachers across Australia, listening to their needs and informing them of the latest developments in the Australian Curriculum. Jane has a Masters in Education with an interest in differentiation, visual learning strategies and inclusion.

Rochelle Manners

Rochelle Manners has worked as a secondary mathematics teacher and trained as a guidance counsellor. She is a mum with three pre-school children who is currently studying editing and publishing while also working in the publishing industry and writing mathematics and science texts for Pearson. She has worked on a number of secondary texts for science, and has been involved with the **enVisionMATHS** project for years 4 to 6.

Carmen Morgan

Carmen Morgan has taught in various education systems for the last 26 years. Her work involves teaching the whole spectrum of students from those who are having learning difficulties to those who need extension and enrichment. She has presented at Maths and IWB conferences for primary publishers, and conducts ongoing professional development and mentoring for teachers.

Carmen has a passion for teaching mathematics and believes the combined elements of the **enVisionMATHS** program, with its provision for differentiation and mathematical skill and thinking development, gives teachers the necessary tools to engage all students in learning mathematics.

Nicole Morrison

Nicole Morrison is a practising classroom teacher. She completed her undergraduate degree and Diploma of Education at Macquarie University and her Graduate Certificate in Training and Development at Charles Sturt University. Nicole has taught at the primary school level in both the public and private systems, and has supervised undergraduate students on professional experience programs. She also spent seven years working in educational publishing as an educational consultant and content developer. Nicole is currently a year 4 classroom teacher and team leader at Knox Grammar Preparatory School in NSW.

John Sandy

John Sandy has taught in primary schools for 17 years, working in numerous schools in Melbourne and country Victoria, as well as in England. He has held the positions of Mathematics Coordinator and Curriculum Coordinator and is currently working as a Deputy Principal of a Catholic primary school in Melbourne. **enVisionMATHS** is the third project he has contributed to for Pearson Education. John has previously worked on the New Signpost Maths Interactive Whiteboard materials and a Maths Readers series.

Matt Skoss

Matt Skoss is an experienced classroom teacher based in Alice Springs. He has taught Years 7 to 11 since 1987, as well as enjoying several curriculum roles with a mathematics and ICT focus for NT Department of Education and Training. He also offers professional learning services on a consultancy basis, with a particular interest in supporting remote and country schools. He has a strong belief in making mathematics visual and accessible to all students, using rich mathematical problems to extend students. He likes to make use of learning technologies and Web 2.0 tools to amplify student learning, leading to the development of a community of learners.

What is enVisionMATHS?

enVisionMATHS is a multi-component, topic-driven print and online teaching and learning program aligned to the Australian Curriculum that gives primary students a deeper conceptual understanding of and higher proficiency in maths. The program incorporates powerful visual learning strategies that make meaningful connections between known and new maths ideas. Differentiated teaching and learning strategies allow teachers to tailor their teaching methods to improve students' learning. The program features extensive teacher support materials, including maths background knowledge, differentiation strategies, instructional questions, suggested lesson sequences and a range of assessment tasks.

The **enVisionMATHS** program at year 4 includes these elements:

- Teacher Resource Box
- Interactive Whiteboard DVD
- Activity Zone
- Student Activity Book
- Maths Thinking Skills Book.

enVisionMATHS is designed to be modular with no prescribed sequence, and this is largely achieved through its topic-driven structure. It can be used for whole-school curricular purposes and NAPLAN assessment preparation as required, and is aligned directly to the new Australian Curriculum. The topics, however, are presented in numerical order to provide a suggested appropriate sequence if this is sought.

This topic-based program also allows for easy links to all the **enVisionMATHS** resources provided in the program, as all these resources are connected by topic.

The topics not only provide a range of lessons that suit the Australian Curriculum but include lessons beyond the Curriculum for further exploration and enrichment.

The number of lessons varies in each topic, depending on the year level and the topic's complexity.

Topics

| | | |
|----------|---|-----|
| Topic 1 | Number and Place Value | 2 |
| Topic 2 | Addition Concepts and Strategies | 12 |
| Topic 3 | Subtraction Concepts and Strategies | 24 |
| Topic 4 | Multiplication Concepts and Strategies | 46 |
| Topic 5 | Angles and Shapes | 66 |
| Topic 6 | Location and Transformation | 78 |
| Topic 7 | Division Concepts and Strategies | 90 |
| Topic 8 | Patterns and Algebra | 112 |
| Topic 9 | Fractions and Decimals | 130 |
| Topic 10 | Time and Temperature | 148 |
| Topic 11 | Length, Area, Capacity, Mass and Volume | 162 |
| Topic 12 | Data, Graphs and Probability | 184 |

enVisionMATHS.

Content Strand Colours

Number and Algebra

Measurement and Geometry

Statistics and Probability

Proficiency Strands

The Proficiency Strands of Fluency, Understanding, Problem Solving and Reasoning are embedded within the lessons throughout this Student Activity Book.

Provided for each topic:

- Teacher Resource Booklet
- Student Lessons
- Games, Investigations, Mental Computation and Digital Activity cards
- Assessment

Digital Environment

enVisionMATHS includes rich digital elements for both teachers and students:

- Digital Activity Cards (in the Activity Zone)
- Teacher Resource DVD: editable teacher planning, Assessment PDFs, Differentiated Worksheets
- Interactive Whiteboard DVD: Visual Learning Animations, Visual Learning Bridges, Tools4Maths

enVision Digital Cards

enVision Digital Activity Cards are included in the Activity Zone and provide topic-based digital tasks and activities for students to undertake on their own.

These are designed to be used with Tools4Maths.

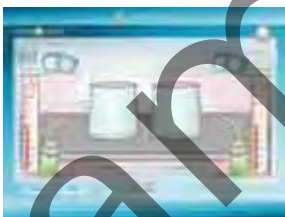

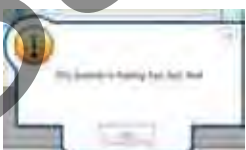

enVision Digital

4

Topic 10

Time and Temperature

Use: **TOOLS4MATHS**

- 1 Go to the Measurement tool.
- 2 Click on the Options tab at the bottom of the screen.
- 3 Click on the down arrow once, click on the Temperature icon and choose the Two Beakers option.
- 4 The following pop-up may appear on the screen:

Click **Yes** to continue and then click on the OK button.
Your workspace should look like this:

- 5 Click on the left-hand blowtorch until the water heats up to 100°C. The following pop-up will appear on the screen when the temperature reaches 100°C:

Click OK to continue.

Time and Temperature

Topic 10

Year 4

Copyright © Pearson Australia (2011) is a division of Pearson Australia Group Pty Ltd. ISBN 978 1 4425 3420 1

Teacher Resource DVD

The year 4 Teacher Resource DVD (included with this Overview and Implementation Guide) contains editable teacher planning material, Pre- and Post-assessment questions and Differentiated Worksheets for all year 3, 4 and 5 lessons within the **enVisionMATHS** program.

Interactive Whiteboard DVD

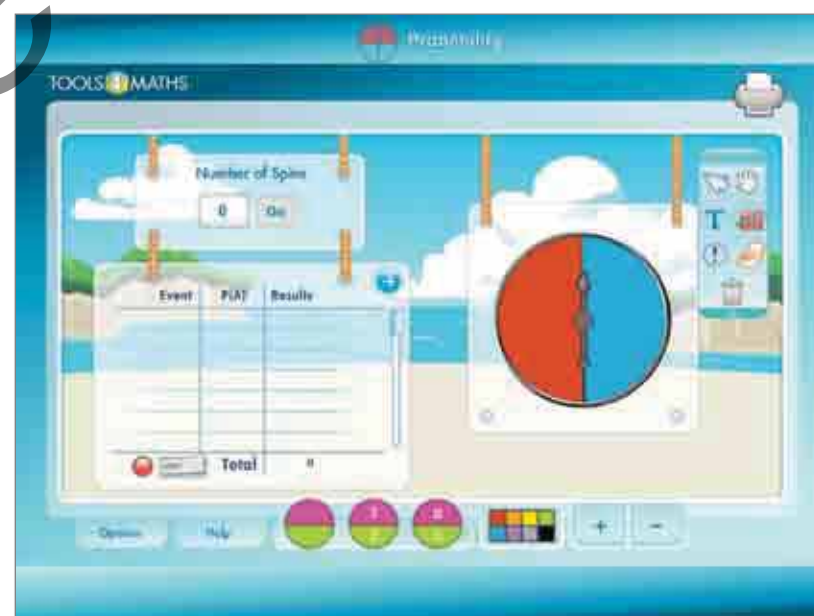

The year 4 IWB DVD contains all Visual Learning Bridges (VLBs) and Animations (VLAs) for year 4, together with Tools4Maths.

Tools4Maths

Tools4Maths is a suite of digital, lively, animated maths learning tools covering place value, counters, money, fractions, shapes and 3D objects, measurement, time, geometry, graphs and probability.

These tools are designed for use either on the class whiteboard or by students (individually or in groups) on their own computers.

Tools4Maths can be used for extension activities to provide further enrichment, or to provide further explanation and practice to aid conceptual understanding.

Conceptual Understanding

enVisionMATHS is designed to foster in students a deep understanding of the mathematical concepts being introduced. This also aligns with the Australian Curriculum's Understanding proficiency strand:

Students build a robust knowledge of adaptable and transferable mathematical concepts. They make connections between related concepts and progressively apply the familiar to develop new ideas. They develop an understanding of the relationship between the 'why' and the 'how' of mathematics. Students build understanding when they connect related ideas, when they represent concepts in different ways, when they identify commonalities and differences between aspects of content, when they describe their thinking mathematically and when they interpret mathematical information.

ACARA, 2010

Extensive research for the **enVisionMATHS** program has shown that daily, problem-based, interactive maths learning, accompanied by visual learning strategies, deepens students' conceptual understanding by making meaningful connections and delivering strong, sequential visual/verbal connections through the Visual Learning Bridge (VLB) in every lesson.

These VLBs provide different ways of looking at mathematical concepts to ensure all learning styles are catered for.

The VLBs are supported and reinforced by accompanying visual learning animations.

Topic 1

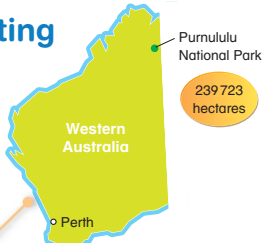

Lesson 2

Understand it!
Whole numbers greater than 999 have groups of three digits.

Reading and Writing Larger Numbers

How can you read and write larger numbers?

Purnululu National Park in Western Australia covers 239 723 hectares of land.

How can you show 239 723 in different ways?

Place-value chart:

| hundred thousands | ten thousands | thousands | hundreds | tens | ones |
|-------------------|---------------|-----------|----------|------|------|
| 2 | 3 | 9 | 7 | 2 | 3 |

thousands group
ones group

A group is a set of 3 digits in a number, starting from the right. Two groups are separated by a space.

Standard form:
239 723

Expanded form:
 $200\,000 + 30\,000 + 9\,000 + 700 + 20 + 3$

Word form: two hundred and thirty-nine thousand, seven hundred and twenty-three

Real-life pictorial images → Mathematical models → Mathematical language

Visual Learning

Research has shown that visual learning strategies deepen conceptual understanding by making meaningful connections for students and delivering strong, sequential visual/verbal connections.

enVisionMATHS focuses strongly on many visual learning strategies. Visual material is used extensively throughout the program: number lines, fractions strips, arrays, Visual Learning Bridges (VLBs), topic-openers, animations (VLAs), bar diagrams and more.

Visual Learning Bridges

The VLBs link the mathematical concepts to real-life situations, thereby making maths less abstract and more meaningful to students.

The VLBs demonstrate the main aspects of a mathematical concept and act as a reference guide for students. They also allow parents to see and understand their child's current maths learning.

Visual Learning Bridge (VLB): presents information in different ways to engage all types of learners.

Topic 4

Lesson 3

Understand it!
Facts for 1 and 2 can be used to find facts for 3.

Using Arrays to Multiply with 3, 6 and 9

How can you break apart arrays to multiply with 3?

The canoes are stored in 3 rows. There are 6 canoes in each row. What is the total number of canoes stored?

Find 3×6 .

Choose an Operation Multiply to find the total for an array.

What You Show

Find 3×6 .

Use 1s facts and 2s facts to help multiply with 3.

Make an array for each multiplication sentence.

$2 \times 6 = 12$

$1 \times 6 = 6$

$12 + 6 = 18$

What You Think

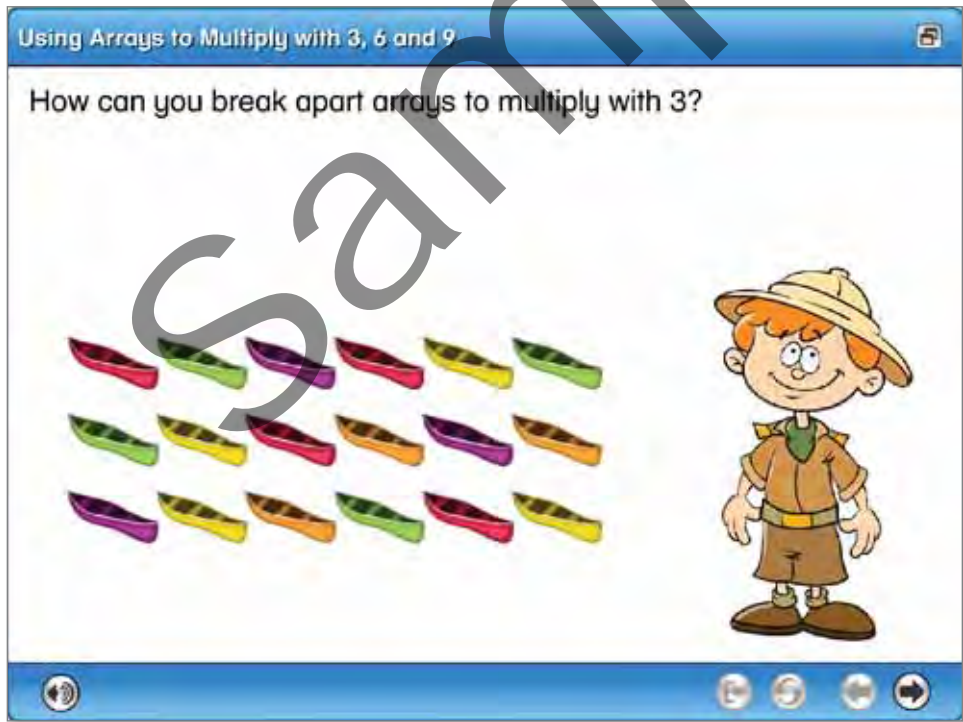

3×6 is 3 rows of 6. That is 2 sixes plus 1 more six.

2 sixes are 12.
1 six is 6.
 $12 + 6 = 18$
 $3 \times 6 = 18$

There are 18 canoes in total.

Visual Learning Animations

The Visual Learning Animations (VLAs) link the mathematical concepts to real-life situations, making maths more meaningful to students. There is one VLA for each lesson in year 4.

Bar Diagrams

Bar diagrams help students solve problems with visual models.

These pictorial bar diagrams are used consistently throughout the program in appropriate formats for each year level. The diagrams are designed to represent abstract maths concepts in a visual image, and to link pictorial models and mathematics symbols. This helps students visualise abstract concepts and aids in conceptual understanding.

Research shows that bar diagrams can be a key to success in problem solving. Bar diagrams help students to understand relationships between quantities in the problem and this helps students to choose a correct operation to solve the problem (Diezmann and English, 2001).

- 6 A car park had a total of 243 cars enter in one day. By 6:00 am, there were 67 cars in the car park. In the next hour, 13 more cars arrived. How many more cars would enter the car park by the end of the day?

- 7 Jill's shoe shop sold 162 pairs of shoes. Her goal was to sell 345 pairs. How many pairs of shoes did she **not** sell?

Bar Diagrams

Tools4Maths

Tools4Maths provides another means of adding visual material to the classroom and provides visual explanations that are sometimes not possible to achieve with concrete materials. For example: changing 3D objects into their nets and building them again, breaking down money into its possible denominations and breaking place-value blocks into units.

Differentiation

The amount of differentiation in the classroom depends on the needs of the class and the planning by the teacher.

enVisionMATHS has differentiation possibilities embedded throughout the program. For each topic in year 4, the Teacher Resource Booklets provide extra activity ideas for ESL and additional needs students. Differentiated Worksheets (Replay, Practice, Challenge) are also provided for use with each lesson.

Teacher Resource Booklet

ESL ideas

Additional Needs ideas

Emerging-level activity idea

Extending-level activity idea

Maths Language

Vocabulary

Language of Fractions and Decimals

Help students become familiar with Topic 9 terms as they relate to fractions strategies. The following terms will all be encountered in this topic.

| Review Vocabulary | New Vocabulary |
|-------------------|---------------------|
| denominator | equivalent fraction |
| numerator | benchmark fraction |
| simplest form | decimal |
| fraction | mixed number |
| equivalent | improper fraction |
| | tenth |
| | hundredth |

Connection to Everyday Vocabulary

Making real-life connections to vocabulary can strengthen students' understanding of mathematical terms.

Fractions

Explain that a fraction is not a whole number. It represents a part of a whole number.

When I eat a fraction of a large pizza, I am eating only a part of it, not the whole thing.

Equivalent Fractions

Things that are equivalent are equal. Equivalent fractions express the same amount, just in different ways. You must use equivalent fractions to find common denominators for fractions with unlike denominators.

Denominator

Remember, to add or subtract fractions, they must both be a fraction of the same total amount, or denominator.

Vocabulary Activities

Common Denominators and Equivalent Fractions

Have students write and add sets of fractions with unlike denominators. First, have them find a common denominator for the fractions, and then write equivalent fractions. Have them make vocabulary cards to label the following words: 'denominator' and 'equivalent fractions'.

$$\frac{1}{4} \text{ and } \frac{1}{8}$$
$$4 \times 3 = 12$$
$$6 \times 2 = 12 \text{ (12 is the denominator)}$$
$$\frac{1}{4} = \frac{3}{12} \text{ and } \frac{1}{8} = \frac{1.5}{12} \text{ [equivalent fractions]}$$
$$\frac{3}{12} + \frac{1.5}{12} = \frac{4.5}{12}$$

Meeting Individual Needs

ESL

Considerations for ESL Students

Repeated oral-language practice of the terms that are used with fractions will help English learners remember and understand the steps. Having students visualise fractions can help them to better understand the fraction concept and be able to describe fractions in detail.

- Beginning** Have students outline 12 adjacent squares on a sheet of centimetre grid paper. Students should outline one row of 12 squares, two rows of six squares, three rows of four squares, four rows of three squares, six rows of two squares and 12 rows of one square. Discuss how each figure is 12 squares. Ask students to shade five squares of each figure. Discuss.
- Intermediate** Have five volunteers line up at the front of the room. Ask 5 of the line to jog on the spot. All members of the line work together to make decisions and follow the instructions.
- Advanced** Ask pairs of students to draw parts of a region. Have one partner give a description, such as 'Tom ate half of a pizza. Dina and Steven ate equal shares of the rest.' Have the second partner draw a diagram of the situation. Partners should work together to identify the fractions created in the drawing.

ESL Activity: Matching Equivalent Fractions

Use with Lesson 9.3

10-15 minutes

Materials

cards with a range of fractions written on them

- Have students play a game with the cards to help them identify the fractions. The game is based on Snap, but with a few differences.
- Students need to Snap when the two cards turned up are equivalent fractions (that is, $\frac{2}{3}$ would be a Snap with $\frac{4}{6}$).
- Instead of saying Snap, they need to say the name of the fraction. Either of the two that are turned up is fine.
- They then take the cards (as per Snap) and must also say the simplest form. There is no rush, but the game cannot continue until they do so.
- The competition is to be the first to identify the same ones. They can help each other to get the simplest form.
- The student who has the most cards at the end wins.

Additional Needs

Considerations for Additional Needs Students

- Students with additional needs may have difficulty understanding when to use estimation. Read these sentences aloud: The cup is about half full. Nearly half of the bowl of salad is gone. Almost one-quarter of the wall is painted. The pool is approximately one-third full of water.
- Discuss the word in each sentence that tells students the fraction is an estimate.

Additional Needs Activity: Feel the Fraction

Use with Lesson 9.1

10-15 minutes

Materials

red and green pencils

- Sometimes a student may understand the meaning of a fraction, but have difficulty translating a depiction to fraction form.
- Draw a rectangle broken into five equal sections with three sections shaded.
- Have students copy the drawing using their red pencil to outline the shape and their green pencil to shade the sections.
- Tell the students green is for go. Start there first.
- Guide them in using green to record the numerator and red to record the denominator. Have students count the number of green sections and the number of parts in total to name the fraction.

Emerging-level

Considerations for Emerging-level Students

- Some students may benefit from concrete demonstrations to develop their understanding of subtraction fractions. Write $\frac{2}{5} - \frac{1}{5}$ on the board. Use fraction strips to represent fifths. Ask: How many of the $\frac{1}{5}$ strips show $\frac{2}{5}$? (Four.) How many of the $\frac{1}{5}$ strips should be taken away to show subtracting $\frac{1}{5}$? (One.) How many fifths are left? (3) Write the difference.
- If students have trouble finding common denominators for equivalent fractions, allow them to use a hundred chart to list multiples for each denominator.

Emerging-level Activity: Pizza Subtraction

Use with Lesson 9.5

10-15 minutes

Materials

large construction paper circle (per pair)

- Have each pair of students fold their circle into eighths and then cut it into pieces along the folded lines.
- Reassemble the circle into its full form and explain that this is a pizza. They have to choose how many pieces they would each eat from the pizza.
- Before they can take their pieces from the pizza, they have to write a subtraction sentence that shows what fraction of the pizza will be left after they have taken their pieces. For example, if the first student wants to take three pieces, he or she would have to write: $\frac{8}{8} - \frac{3}{8} = \frac{5}{8}$.
- After they have taken their pieces from the pizza, have the students draw the situation that goes along with their subtraction sentence. Example:

Extending-level

Considerations for Extending-level Students

- Students who have mastered fraction concepts may enjoy playing games with fractions.
- Prepare a set of 26-30 index cards with a different fraction written on each card.
- Groups of students mix up the cards and deal them out to each player.
- Students turn over the first card in their stack.
- The student with the card showing the greatest fractional amount keeps the whole pile of turned-over cards.
- The game ends when one student has all the cards.

Extending-level Activity: Writing a Maths Explanation for Scientific Data

Use with Lesson 9.2

10-15 minutes

- Ask students to experiment to find out how many times their hearts beat per minute. Start the timing and then announce the passing of one minute. Tell students to stop counting at the end of a minute. Ask: How many counted 72 beats per minute? Fewer beats in a minute? More beats in a minute? Display this data. Have students compare it with their data.

| Mammal | Average Beats per Minute |
|----------|--------------------------|
| Human | 72 |
| Mouse | 600 |
| Elephant | 30 |
| Whale | 9 |

- Students could enter this data into a spreadsheet and display them in a bar graph. Then have students write a maths explanation using fractions to compare some of the data. (Sample answer: An elephant's heart beats more than three times as fast per minute as a whale's heart does.)

Research says to give all students access to the same content but level the instruction based on how much support different students need (Cotton, 2001).

10 Overview Differentiation

- Visual Learning Bridge
- Another Example feature
- Guided Practice questions
- Independent Practice questions
- Problem-solving questions.

Visual Learning Bridge (VLB): presents information in different ways to engage all types of learners.

Independent Practice: confident students can progress at their own speed.

Another Example

How can you draw parts of a whole and parts of a set?

Draw parts of a whole

Draw a flag that is $\frac{3}{5}$ green.

In both flags there are 5 equal parts
and 3 of the parts are green.

Both flags are $\frac{3}{5}$ green.

Draw parts of a set

Draw a set of shapes in which $\frac{4}{10}$ of the shapes are small triangles.

There are 4 small triangles out of 10 shapes. So, $\frac{4}{10}$ or four tenths of the shapes are small triangles.

Guided Practice

Write a fraction to describe the part of the whole or set that is green.

Draw a model for each fraction.

3 $\frac{4}{5}$ of a grid

4 $\frac{2}{9}$ of a set

Parts of a Whole

The **numerator** tells how many equal parts are described. The **denominator** tells how many equal parts there are in total.

$\frac{2}{3}$ ← Numerator
 $\frac{2}{3}$ ← Denominator

In the Nigerian flag, $\frac{2}{3}$ of the flag is green.

Parts of a Set

These flags show the first 4 letters in the International Code of Signals:

What fraction of these flags are rectangles?

$\frac{2}{4}$ ← Number that are rectangles
← Total number in set

In this set of 4 flags, $\frac{2}{4}$ are rectangles.

Independent Practice

5 What fraction of the signal flags at the top of the page contain blue?

6 What fraction of the flags contain yellow?

7 Why do these fractions both have the same denominator?

Write a fraction to describe the part of each whole or set that is green.

Problem Solving

10a It rained for $\frac{4}{7}$ of the week, but not on the weekend. On which days might it have rained?

b What fraction of the week didn't it rain and what might the weather have been like on those days?

Guided Practice: students apply the concept with teacher support.

Problem Solving: open-ended questions. Capable students can be challenged and less-capable students will also be able to come up with an answer.

Another Example: presents the concept in a different example to consolidate understanding.

Differentiation

Activity Zone Cards

enVision Minds Cards: quiz questions are in groups of six, with each group being progressively more difficult.

enVision Digital Cards: follow-up tasks are provided to allow the more motivated and capable students to extend the task further. These cards are designed to be used with Tools4Maths.

enVision Investigations Cards: provide real-life investigations related to the topic and are progressively more challenging.

enVision Games Cards: cards are two-sided, with the first side (★) being suitable for all students and the second side (★★) being an extension.

enVision Minds
Topic 1 Number and Place Value
CARD A QUIZ 4

Instructions

- Read each question to your partner and ask them to write each answer in their *Maths Thinking Skills Book*.
- Check if their answer is correct and ask them to place a ✓ or a ✗ beside their answer.
- Ask them to count the number of ticks and write the number in the 'Total' box at the bottom of their page.

| | |
|---|------------------|
| 1 What is the smallest number you can make with the digits 7, 4 and 8? | 478 |
| 2 Round 782 to the nearest 100. | 800 |
| 3 What is 100 more than 132? | 232 |
| 4 What is 100 less than 126? | 26 |
| 5 In which column is the digit 6 in the number 1 679? | hundreds or 100s |
| 6 What is the total of $3000 + 400 + 50 + 9$? | 3459 |
| 7 What is the smallest number you can make with the digits 9, 7, 3 and 5? | 3579 |
| 8 Round 4 567 to the nearest 1 000. | 5000 |
| 9 What is 100 more than 723? | 823 |
| 10 What is 100 less than 862? | 762 |
| 11 How many hundreds are there in total in 8 754? | 87 |
| 12 Which number is larger: 1 892 or 1 982? | 1 982 |
| 13 What is the largest number you can make with the digits 2, 0, 4 and 6? | 6 420 |
| 14 Round 2 495 to the nearest 1 000. | 2000 |
| 15 What is 100 more than 948? | 1 048 |
| 16 What is 100 less than 1 026? | 926 |
| 17 How many hundreds are there in total in 3 405? | 34 |
| 18 Which number is larger: 3 098 or 3 089? | 3 098 |

enVision Digital
Topic 4 Multiplication Concepts and Strategies
4

Use:

- Go to the Counters tool.
- Click on the Options tab at the bottom of the screen.
- Click on the down arrow twice and then click on the Hundred Chart icon.
- The following pop-up may appear on the screen:

Click **Yes** to continue and then click on the OK button.

- Click on green in the Paint palette and then click on the green Splat Point icon in the menu at the bottom of the screen.
- Now click on the number 9 in the Hundred Chart. Count on nine, and click on 18. Count on another nine and click on 27. Your workspace should now look like this:
- Continue doing this until you reach the end of the Hundred Chart. Your workspace should now look like this:

enVision Games
Topic 6 Location and Transformation
CARD B ★ 4

You Need

- 10 counters in one colour and 10 in another colour
- 1 paperclip
- 1 dice

How to Play

Take turns. Roll the dice to choose an oval. **EXAMPLE:** Choose the third oval on the left, or choose the third oval on the right. Mark your oval with a paperclip.

Find the compass point on the board that matches the shortened form in your oval. Cover it with a counter.

The first player to connect three squares on the board in a row vertically, horizontally or diagonally is the winner.

| | | | | | |
|----|-------|------------|------------|-------|----|
| N | north | north-east | south-east | south | N |
| E | | | | | E |
| S | east | south-east | north-east | north | S |
| W | south | north-west | north-east | west | W |
| NE | | | | | SE |
| NW | west | south-west | south-east | east | SW |

Play again!

enVision Investigations
Topic 1 Number and Place Value
CARD A 4

- Investigate the heights of the teachers in your school. Show how you could organise these heights.
- Find out how heavy you were when you were born. Compare your mass with other students' masses and put them in order.

Differentiated Worksheets

Worksheets are provided in PDF format on the Teacher Resource DVD (at the back of this book). A Replay, Practice and Challenge worksheet is provided for each lesson within each topic. These are designed for below-level, at-level and above-level students, with the teacher directing students to the appropriate worksheet. The Replay and Practice worksheets are directly related to the topic. Some of the Challenge worksheets aim to extend the students within the topic while others aim to enrich student learning beyond the topic.

Teachers can use these worksheets in a number of ways, as desired: for homework, extra practice, revision classes etc.

Worksheets for years 3, 4 and 5 are provided on the year 4 Teacher Resource DVD.

Using Models to Add 3-Digit Numbers

Find $152 + 329$.

Step 1: Show each number with place-value blocks.

Step 2: Combine the ones. $2 + 9 = 11$

Step 3: Combine the tens. $50 + 20 = 70$

Step 4: Combine the hundreds. $100 + 300 = 400$

Step 5: Add. $400 + 70 + 11 = 481$

Write each problem and find the total.

City Squares

James and Belinda travelled from their hometown, Mathsville, to several different cities. The table shows the distances from Mathsville to each city. Use the distances to divide each city square, shown below, in half. In the squares, each city is represented by the first letter in its name. The total of the distances in one half of the square must equal the total of the distances in the other half.

| Distances from Mathsville to: | |
|-------------------------------|--------|
| Allentown | 359 km |
| Bensonville | 430 km |
| Centropolis | 110 km |
| Denton City | 119 km |
| Edgerton | 249 km |
| Franksburg | 229 km |
| Grandview | 158 km |
| Highfield | 407 km |
| Irving Glen | 178 km |

enVisionMATHS Components

enVisionMATHS components cater for the seven year-levels of the Australian Curriculum: Mathematics F–6.

These components can be adapted to all primary maths classrooms around Australia and can be taught in any order.

2012 Release

- Teacher Resource Box
- Interactive Whiteboard DVD (including Tools4Maths)
- Student Activity Book
- Activity Zone (investigations cards, mental computation cards, games cards, digital activity cards)

Maths Thinking Skills Book

Teacher Resource Box

Overview and Implementation Guide

The Overview and Implementation Guide provides the outline of the series for each year level, together with program implementation guidance.

Teacher Resource DVD

The Teacher Resource DVD is in the back of the Overview and Implementation Guide. The year 4 DVD contains all Differentiated Worksheets, Visual Learning Bridges, Pre- and Post-assessments, and editable teacher planning documents for years 3, 4 and 5.

Teacher Resource Booklets

The Teacher Resource Booklets are presented in the Teacher Resource Box for protection and portability. For year 4 the box includes 12 colour-coded topic booklets (and the Overview and Implementation Guide). Each booklet includes the planning and assessment information and tools necessary to implement each topic of the program. Each booklet also includes reduced-sized copies of all components for the topic so that teachers need only take a lightweight booklet with them for their planning when working away from school.

Interactive Whiteboard DVD

The Interactive Whiteboard DVD includes captivating animations (VLAs) which assist teachers to explicitly teach the underlying mathematical concepts in each topic. The Visual Learning Bridges (VLBs) are also on this DVD. These link each of the important maths concepts to result in a deep conceptual understanding for students. For year 4, there are 89 VLAs and VLBs.

The DVD also includes Tools4Maths—a set of digital maths tools for student or class use on PCs or the whiteboard.

enVisionMATHS Components

Student Activity Book

The Student Activity Book at each year level allows for furthering conceptual understanding, building fluency, reasoning, mental computation and open-ended problem solving. The Student Activity Books are full colour and make extensive use of engaging visual-learning strategies. The Student Activity Book for year 4 covers 12 topics and 89 lessons.

Topic 6 Lesson 2

Understand it!
Compass directions describe the direction between objects.

Using Compass Points to Describe Location

How can you use compass directions to locate position?

You can describe the direction between objects by using the points of a compass.

The four major compass points are *north*, *south*, *east* and *west*, shown here on the compass rose.

The extra compass points of *north-east*, *north-west*, *south-west* and *south-east* help us to describe position more accurately.

For example, Darwin is to the north-west of Tennant Creek.

Guided Practice

1 Label the compass rose.

Use the map to find the location.

2 Which city is north of Kalgoorlie?

3 Which state is west of the Northern Territory?

4 Which state is directly north of NSW?

5 What direction is Tasmania from Victoria?

A **scale** helps us to reduce the size of an area so that it fits onto the page.

6 Explain the scale used on the map of Australia above.

7 Circle the scale that you would use for a map of a house if it was drawn on this page.

A 1 cm = 100 m B 1 cm = 1 cm C 1 cm = 2 m D 1 cm = 1 km

Independent Practice

Use the map of South Australia to find each location.

8 Which town is south-west of Whyalla?

9 Which town is north-west of Port Lincoln?

10 What direction is Port Augusta from Coober Pedy?

11 What direction is Ceduna from Victor Harbor?

12 What direction is Mount Gambler from Coober Pedy?

Problem Solving

13a Using compass points and beginning from START, create a secret word or message. Each cell is one step.

| | | |
|-------|---|---|
| I | P | B |
| D | C | W |
| Y | Q | X |
| J | U | K |
| E | S | G |
| R | N | T |
| START | F | O |

b Ask a classmate to work out your secret word or message.

Activity Zone

The Activity Zone comprises a box of sturdy, laminated cards that are designed to promote interaction between students and to make their maths learning meaningful and enjoyable. The Activity Zone for year 4 includes 24 Minds cards, 36 Investigations cards, 48 Games cards and 12 Digital cards. Each card is colour-coded and topic-based. Opportunities for differentiation have been embedded by levelling the games. Students record their responses to these cards in the Maths Thinking Skills Book.

The year 4 Activity Zone Box contains one copy of each Games card, two copies of each Minds and Investigations card and four copies of each Digital card for year 4. It also includes sturdy topic dividers that clearly show the topic name and number and how many cards belong with that topic. In some cases, boxes may arrive with the dividers and cards wrapped separately; if so, the cards will need to be collated into their appropriate topics.

enVision Investigations CARD A 4

Number and Place Value

1 Investigate the heights of the teachers in your school. How could you organise the data?

2 Find out how heavy you are. Compare your mass with other masses and put them in order.

enVision Minds CARD A 4

Number and Place Value

Rounding Numbers

At Beachside Primary School there are 278 girls. Approximately how many students attend Beachside Primary School?

Rounding numbers to estimate can be a strategy to use when looking for an approximate answer. Round up when the number in the tens place is 5 or above, and round down when the number in the tens place is 4 or less.

278 rounds up to 300
312 rounds down to 300
300 plus 300 is 600.

So there are approximately 600 students at Beachside Primary School.

Round these numbers up or down to the nearest 100. Give an approximate answer. Take turns to answer your thinking to your partner.

1 123 + 378 = ?
2 239 + 287 = ?
3 1410 + 320 = ?
4 1285 + 476 = ?

Make up a question for your partner to answer using the strategy. Talk about two situations when you might use this strategy in real life.

enVision Digital CARD A 4

Number and Place Value

Use:

1 Go to the Place-value Blocks tool.

2 Click on the Options tab at the bottom of the screen.

3 Click on the down arrow twice, click on the Place-value Blocks icon, and then scroll along and choose the Thousands. Click on the OK button.

4 Click on the Maths Mate button at the top of the screen. Stop when you get to 3000. Your workspace should now look like this:

5 Now click on the Hundreds icon in the menu at the bottom of the screen and then click five times in the HUNDREDS column. Count aloud with each click ("three thousand, one hundred; three thousand, two hundred; three thousand, three hundred etc."). Check that what you say each time matches the number next to the Maths Mate button at the top of the screen. Stop when you get to 3500. Your workspace should now look like this:

enVision Games CARD A 4

Number and Place Value

Display the Digits

You Need: 12 ten-blocks

How to Play: Take turns. Explain how to answer each question. Display each 0-9 tile exactly once.

a. How many digits do you use to write ten thousands in standard form?

b. In standard form, one thousand, four hundred and sixteen has which digit in the tens place?

c. In standard form, 5000 + 500 + 1 has which digit in the hundreds place?

d. In standard form, one thousand, four hundred and sixteen has which digit in the tens place?

e. In standard form, 5000 + 500 + 1 has which digit in the tens place?

f. Twenty hundreds equals how many thousands?

g. In standard form, one thousand, four hundred and sixteen has which digit in the ones place?

h. The largest 1-digit number begins with which digit?

i. Four thousand, six hundred and eighty has which digit in the tens place?

j. Twenty tens equals how many hundreds?

Make up other questions like these. Ask your partner to display the answers with 0-9 tiles.

Maths Thinking Skills Book

The Maths Thinking Skills Book is aligned directly to the card activities in the Activity Zone. It provides opportunities for students to record their maths thinking in areas such as games strategies, investigations and reflection. This book provides teachers, students and parents with a valuable portfolio of a student's mathematical thinking and their goals for that year's work.

There is one book suitable for use in years 3, 4, 5 or 6 and another book suitable for use in years F, 1 or 2.

How is enVisionMATHS Different?

enVisionMATHS combines modular, print-based teaching resources with breakthrough digital teaching and learning tools. This fully integrated combination of print and digital teaching tools makes **enVisionMATHS** different to other Australian primary mathematics programs.

The use of Visual Learning Bridges and instructional animations is unique to the program and provides for deep conceptual understanding of maths in accordance with the aims of the Australian Curriculum.

- **enVisionMATHS** is a complete program containing all that is needed to provide a variety of learning experiences and differentiation across F to 6. This breadth and the inclusion of elements such as the IWB DVD, Activity Zone and Maths Thinking Skills Book differentiates it from the usual Activity Book and Teacher's Guide of other maths programs. This multi-component approach makes it easier for teachers to find relevant content, and broadens students' experiences by giving them a greater range of materials to work with.
- Everything is organised around topics and everything connects: Teacher support → VLA → Student Book → Activity Zone → Maths Thinking Skills Book → Differentiated Worksheets → Assessment. (This is a different approach to series that take items which were conceived and developed separately then place them together as programs.)
- The Activity Zone and Maths Thinking Skills Book pairing is unique.
- **enVisionMATHS** gives students a voice by providing many opportunities for students to discuss, work in groups and reflect.

enVisionMATHS delivers a truly flexible and comprehensive program through its multi-component but straightforward structure and in-built differentiation and assessment.

en**Vision**MATHS™

enVisionMATHS and the Australian Curriculum

enVisionMATHS is aligned with the Australian Curriculum maths content and proficiency strands.

Throughout all the **enVisionMATHS** components, the following colours have been allocated to the three Australian Curriculum maths content strands:

- Number and Algebra
- Measurement and Geometry
- Statistics and Probability

These colours show at a glance which strand is being focused on and provide clear links to the curriculum.

The four Australian Curriculum proficiency strands (Understanding, Fluency, Problem solving and Reasoning) are embedded throughout the **enVisionMATHS** program and are specifically addressed as follows and as displayed below.

- Understanding (build and apply knowledge, make connections): use of Visual Learning Animations and Bridges to explain maths concepts; investigations cards
- Fluency (develop skills in applying appropriate procedures, recall and apply facts and concepts; becoming a mathematician): Guided and Independent practice in Student Activity Books, Mental computation and Minds cards, Tools4Maths
- Problem-solving (make choices, interpret, model, communicate): open-ended problem-solving for every lesson in the Student Activity Books; Investigations and Games cards
- Reasoning (reason mathematically by analysing, proving, evaluating, explaining, inferring, justifying and generalising): Reasoning activities are explicit on Student Activity Book pages and in the Maths Thinking Skills Book.

All aspects of these Australian Curriculum content and proficiency strands are included in the Diagnostic Pre-and Post-assessments designed for each topic.

enVisionMATHS also encourages and aids the implementation of the Australian Curriculum's overarching aim of inquiry and active participation and puts in place the means to develop general capabilities.

The seven general capabilities are 'The skills, behaviours and attributes that students need to succeed in life and work in the twenty-first century'. Teachers will be asked to incorporate the general capabilities into their planning. This is how **enVisionMATHS** will help:

- Literacy: focus on vocabulary (page 4 of any Teacher Booklet), Topic Openers, use of Maths Thinking Skills Books, viewing and responding to Visual Learning Animations, reading and understanding problems and investigations
- Numeracy: evident in **enVisionMATHS** content and in working through problems, investigations, use of Maths Thinking Skills Book.
- Competence in information and communication technology: exploration and use of Tools4Maths
- Critical and creative thinking: evident in problem-solving and investigations
- Ethical behaviour: evident in selecting and interpreting data
- Personal and social competence: evident in real-life understandings such as timetables, financial maths; working in groups
- Intercultural understanding: evident in Topic Openers in years 3 to 6, which give real-life maths contexts from around the world.

Students are encouraged to take responsibility for their own learning in maths and to work collaboratively in teams.

Activities relevant to the three cross-curriculum priorities in the Australian Curriculum (Aboriginal and Torres Strait Islander histories and cultures; Asia and Australia's engagement with Asia; and Sustainability) are embedded throughout **enVisionMATHS**. The Australian Curriculum: Mathematics identifies which content descriptions best lend themselves to these priorities.

Fluency: guided and independent practice sections are included on each SAB lesson page.

Reasoning: specific questions are embedded in lessons.

Understanding: Visual Learning Bridges enhance conceptual understanding.

Problem solving: sections appear in each lesson and involve open-ended problem solving.

Understanding it!
Acting out a problem can be helpful when using reasoning to find the answer.

Acting Out to Reason About 3D Objects
You can use different views of a figure to understand what the figure looks like.
Janet built this figure out of cubes. Then she coloured the faces she could see.

Here are three different views of the figure Janet built.

Front View Left Side View Top View

Use the drawings to help you build the same figure. You will need 8 cubes.

Guided Practice
1 Use cubes to build the figure shown in these pictures.
Draw the front, side and top view of the figure shown below. Use grid paper to help if you need to.

Reasoning
3 Would a drawing showing the right side of Janet's figure at the top of the page be the same as the drawing showing the left side? Explain.

Independent Practice
4 Use cubes to build the figure shown in these pictures.

74 seventy-four

Use the figures shown below.

5 Draw the front, right side and top view of the figure.

6 Which drawing shows the front view of this figure?

Problem Solving
7a Bill used 27 cubes to build a figure that looked like a chair. Build a figure to show what it might have looked like.
b Use grid paper to show the front, side, top and back view.

seventy-five 75

Research and Development

Extensive research has informed the development of **enVisionMATHS**.

Australian Research Phase

| Period | Action |
|-----------------------------|--|
| early 2009 | → Analysis of existing enVision components to determine suitability in Australian environment, conducted by Pearson Australia Primary Maths publishing team |
| early 2009 | → Workshop led by Pearson Australia Primary Maths publishing team together with Catherine Pearn (University of Melbourne) and Heidi-Lee Reitsma (Queensland) to formulate list of topics for each year level in line with current Australian teaching practices across the Australian states and early information on shape of maths in the Australian Curriculum |
| mid-2009 | → Extensive interviews with Australian primary teachers to verify findings |
| throughout 2009 | → Substantial changes formulated for Australia including (but not limited to) introduction of new components Maths Thinking Skills Books and Activity Zones (including investigations and mental computation strategy cards); realignment of topics and year levels; change to more open-ended problem-solving approach and appointment of writer to provide a problem-solving strand across the year levels; change to scrapbook-size workbooks for F–2 |
| November 2009 | → Workshop with Paul Swan, Linda Marshall, Catherine Attard, Linda Flanagan, Deborah Vietri, Jenny Saunders, Terri Bullock, Carmen Morgan, Heidi-Lee Reitsma, John Sandy, Greg Thomas and Nicole Morrison to review instructional design and commission writers |
| October 2009–September 2010 | → Continual consultation and revision over Australian writing phase |
| March 2010 | → Phase 1 revision based on Australian Curriculum draft |
| June 2010 | → Focus group with primary teachers to problem-solve on draft |
| November 2010 | → Assessment pathway revised |
| December 2010–July 2011 | → Phase 2 revision based on Australian Curriculum |
| 2011 | → Reports from pilot schools in Australia will inform future refinements |

Original Research Phase

Four distinct phases of research were integrated into the development of the original enVision program in the US.

Phase 1 ★ Ongoing research

Ongoing research with existing Pearson programs (such as Scott Foresman Mathematics, Scott Foresman/Addison Wesley Math and Sliver Burdett Ginn Mathematics programs) provides a strong basis for success. Scores on standardised tests as well as longitudinal studies prove these programs help raise maths scores.

Phase 2 ★ Scientific research base

An experienced authorship team incorporated findings from the large body of available scientific research to develop the instructional and assessment tools.

Phase 3 ★ Formative research

As the program was designed, valuable input was contributed by classroom field studies, as well as leading mathematicians, administrators, teachers and reviewers. Pre- and post-test scores proved the research findings were on track.

Phase 4 ★ Summative research

Ongoing scientific research, including longitudinal studies in the classroom, further validates the program's effectiveness and supports the commitment to producing the highest quality mathematics materials.

A Research Study

PRES Associates, an independent research firm, conducted a longitudinal randomised control trial study to assess the effectiveness of **enVisionMATH** in helping students attain critical maths skills. The study commenced in 2007–8 with 2nd and 4th grade students and followed these students into 3rd and 5th grades in 2008–9. The final sample comprised 708 students who participated in both years of the study. Fifty-six teachers participated in the first year of the study, and forty-four participated in the second year. The participating schools represented suburban and rural communities from eight US states.

Successful Results enVisionMATH

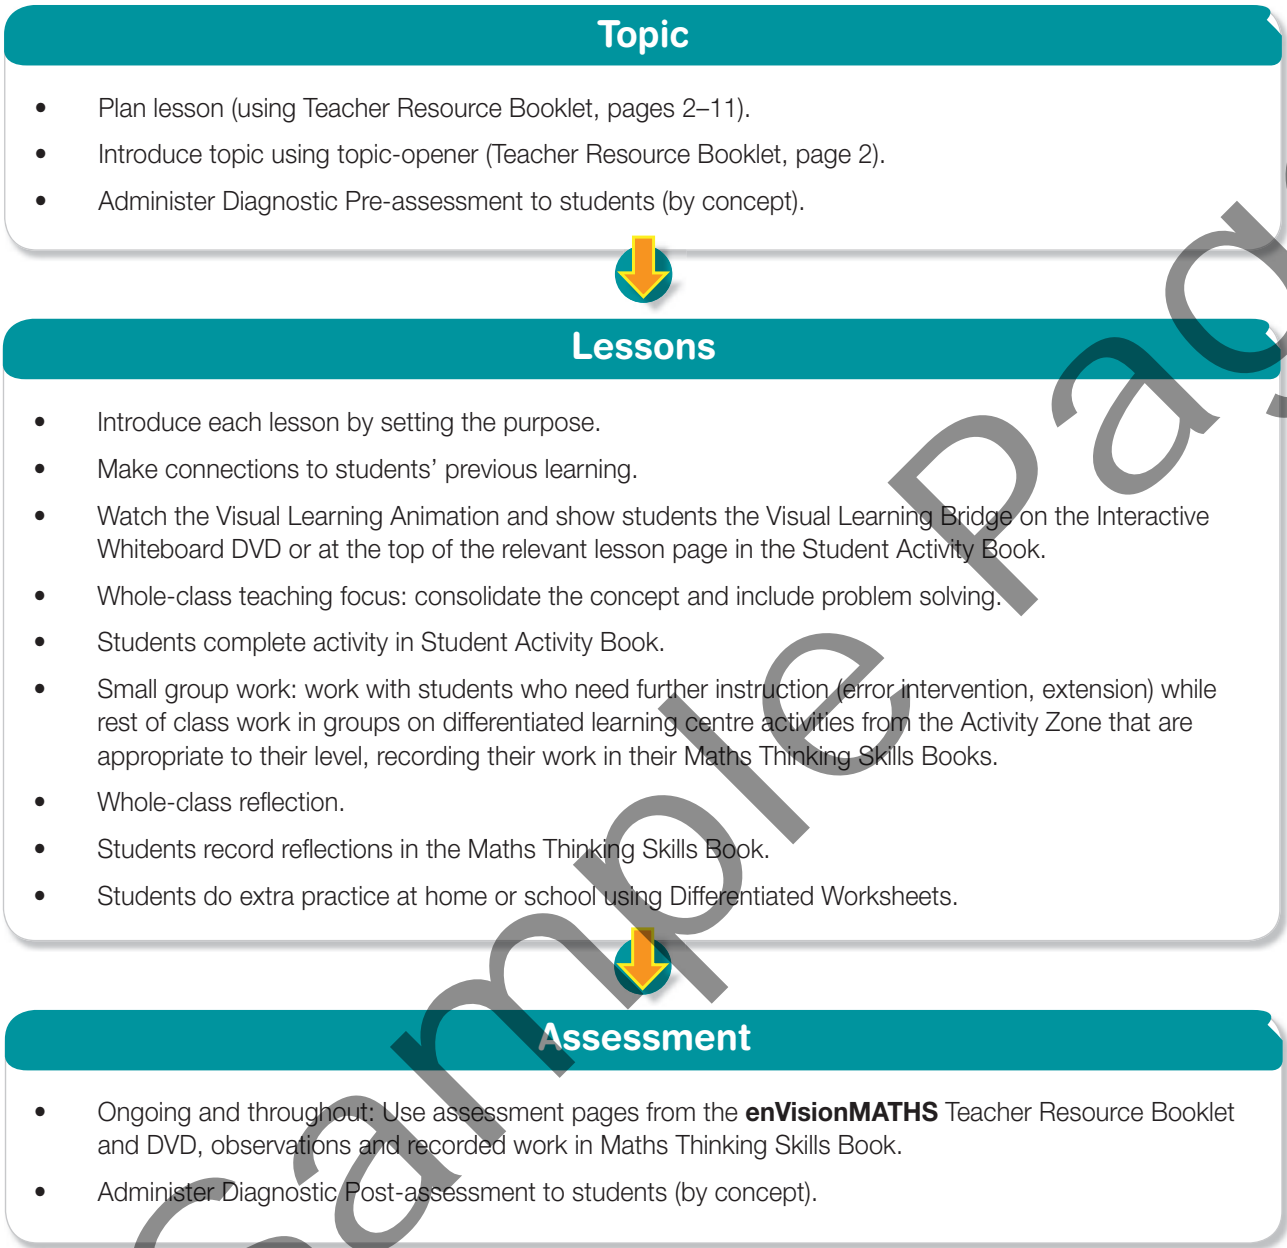

Students of all ability levels using **enVisionMATH** demonstrated significantly greater improvement than students using other maths programs in the areas of: Maths Computation, Problem Solving and Maths Communication.

Furthermore, the data suggests that increased student and teacher exposure to **enVisionMATH** produces stronger effects with the rate of growth becoming more pronounced in the second year of usage.

Suggested Teaching Sequence

enVisionMATHS provides a flexible sequence with topics that are organised and colour coded by content strand, and which are small enough to be rearranged into a personalised curriculum that matches the preferred sequence of a class/school.

The key to the implementation of **enVisionMATHS** in the classroom is the sequencing of the program elements. A suggested teaching sequence is provided below.

Note: Teachers are free to adapt this sequence to best suit their classes.

How Long Does a Topic or Lesson Take to Do?

Year 4 has 89 lessons across 12 topics. The topics range from 4 to 10 lessons. A lesson would take about 2 hours (two 1-hour blocks) so about 2 to 3 lessons could be covered in a week. A topic would therefore range from nearly 2 weeks for the shortest topic to about 4 weeks for the longest, with those with an average 6 to 8 lessons taking 2 to 3 weeks each including time needed for assessment.

In summary:

A lesson = 2 hours

A topic = average 3 weeks

12 Topics × 3 weeks = 36 weeks

See pages 26 to 37 for an approximate time allocation per topic.

The year 4 Teacher Resource DVD (at the back of this book) includes editable planning documents related to years 3, 4 and 5 to assist with planning **enVisionMATHS** work throughout the year.

These planning documents are simple, flexible Microsoft® Excel® spreadsheets. They match Australian Curriculum strands and substrands to **enVisionMATHS** lessons, and provide the relevant Student Book and Teacher Booklet page references for each lesson. Other columns in the spreadsheet are left blank for teachers to use as they wish.

In developing **enVisionMATHS**, it was recognised that teachers need to fit in with their whole-school planning, so there is no prescribed sequence. The suggested teaching sequence can be used as a guide but

the program has been designed to be flexible and can be implemented as a whole-class program or used with different ability groups.

Note that the Student Activity Books do not include extensive practice examples. The program focuses on understanding concepts and enrichment while providing the flexibility for teachers to introduce their own practice examples through the use of the Differentiated Worksheets, if they wish.

The year 4 contents sequence on pages 26–37 provides an at-a-glance view of the program’s components and suggested resources for each topic.

2009 marked the 150th anniversary of London's world famous clock, Big Ben. In what year did Big Ben first chime? Big Ben is actually the name given to the massive bell inside the clock tower. Find out who it was named after.

How many Earth days does it take Mercury to revolve around the Sun? As the closest planet to the Sun, what is the surface temperature of Mercury?

In western astrology, there are twelve signs of the Zodiac. Find out the names of all twelve star signs and the dates they begin and end on the calendar.

148 one hundred and forty-eight

Length, Area, Capacity, Mass and Volume

Suggested time: 4 weeks

Topic 11

Length, Area, Capacity, Mass and Volume

The Australian fur seal is the largest of its kind found in Australian waters. The average weight of a male fur seal is 350 kg. The female is much smaller, only weighing 100 kg. What is their combined weight?

The standard size of a turf cricket pitch is 20.12 m long and 3.05 m wide. Use a calculator to find the perimeter and the area of a pitch with these measurements.

The Murray River flows through three states and is Australia's longest river. Find out how long the Murray is and which states it flows through.

Sample Pages

Literacy and Language

enVisionMATHS places a strong emphasis on mathematical language and terminology. The program allows for literacy to be embedded within the mathematical learning and also provides advice on introducing and explaining terminology and vocabulary to ESL students.

Level-appropriate lists of vocabulary are provided for each topic on the Student Activity Book topic-opener pages and on page 4 of the Teacher Resource Booklets. The vocabulary for year 4 has been compiled alphabetically below for easy reference.

Students can record all new maths language in the My Maths Language pages in the Maths Thinking Skills Book.

‘Research says mathematics is like a language and some techniques used to learn language can be used to learn the language of maths’ (Paris & Cunningham, 1996).

Maths Language

Vocabulary

Language of Number and Place Value

Help students become familiar with Topic 1 terms as they relate to number and place value. Students should learn how to write in word and standard forms. The following terms will all be encountered in this topic.

| Review Vocabulary | New Vocabulary |
|-------------------|--------------------|
| one | standard form |
| ten | expanded form |
| hundred | word form |
| thousand | place-value chart |
| digit | place-value blocks |
| even | hundred thousand |
| number line | greater than |
| odd | less than |
| compare | ascending order |
| order | descending order |
| whole numbers | |
| estimation | |
| approximation | |
| estimate | |
| round | |

Connection to Everyday Vocabulary

Making real-life connections to vocabulary can strengthen students' understanding of mathematical terms.

Rounding
Remember, rounding replaces one number with another number that tells about how many or how much.

Standard Form
The word form of two thousand, three hundred and fifty-four books can be written in standard form as 2354 books.

Vocabulary Activities

How to Write Numbers
Write the number 214525 on the board or a chart. Ask students to write this number in expanded form and word form, adding labels to each form.

214525

expanded form:
 $200\,000 + 10\,000 + 4\,000 + 500 + 20 + 5$

word form:
two hundred and fourteen thousand, five hundred and twenty-five

ESL

Considerations for ESL Students

Repeated oral-language practice of the terms that describe place value will help English learners remember and understand the patterns.

- Beginning** Focus on one place value at a time. Emphasise how the names of the ones group (ones, tens and hundreds) relate to the names in the other groups. When discussing groups other than the ones, use numbers such as 592 000 with zeroes to emphasise the group you are considering.
- Intermediate** Write numbers in the place-value chart and in word form, leaving out parts of the word form. Have students use the chart to help them complete the word form.
- Advanced** Draw a place-value chart on the board. Have students draw nine vertical lines on a piece of paper to represent digits through the hundred millions. Make sure they leave spaces to help them determine the different groupings. Call out a digit and a place value, such as nine hundred thousand, and have students write the digit in the correct place.

ESL Activity: Placement of Numbers

Use with Lesson 1.2
10–15 minutes

Materials
number cards (0–9)
extra 0 cards

Create a set of number cards or use a set of cards that have the numbers 0–9. Create a number of extra cards with zeroes on them. Ask students to determine the placement of the number 3 if it was in 3 ones or 3 thousands by adding zeroes. Have them demonstrate using the cards. Have students create a list of numbers you request using the cards. They can do this in pairs. Ask them to say the numbers to each other, including the 'and'.

4 Topic 1 Number and Place Value Maths Language

The Multi-age Classroom

enVisionMATHS is designed to allow for differentiation at all stages and provides resources that allow the planning of pathways for different ages and levels within the same classroom.

- **Skills Trace** in the Teacher Resource Booklet gives advice on which lessons from the preceding and following year levels relate to the topic.
- **Topics** starting with general knowledge and vocabulary make students think about the maths and the 'why' of the strategies, making real-life connections.
- Open-ended **problem solving**, catering to a variety of skill levels, is provided in every lesson.
- Topic-based **Activity Zone Cards** present differentiated learning activities:
 - **Investigations Cards**—progressively more advanced inquiry activities
 - **Games Cards**—provided at two different levels
 - **Minds Cards**—maths computation strategies and quizzes with sets of questions increasing in complexity
 - **Digital Cards**—allow students to work at their own pace with Tools4Maths.
- **Differentiated Worksheets** on the Teacher Resource DVD provide three levels of activity to cover replays, practices and challenges.
- **Individual needs** activity ideas and strategies
- **ESL needs** strategies and activity ideas
- **Error intervention** tips
- **Extension** ideas

enVisionMATHS lends itself to an inquiry-based classroom through the topic opener pages and investigations that encourage cross-curricular and interdisciplinary study. The abundance of separate resources such as Activity Zone cards, Visual Learning Animations (VLAs), Differentiated Worksheets and Tools4Maths can then be used with different age and ability groups as required. The Teacher Resource DVD, which covers three year level components, can provide the means to plan for this. To aid in planning, the program provides for year 4:

- Pre- and Post-assessments for years 3, 4 and 5
- VLBs and planning documents for years 3, 4 and 5
- Differentiated Worksheets for years 3, 4 and 5
- colour-coded strands throughout the program
- easy-to-use sections of text in the Teacher Resource Booklets that are short but colourful and informative.

Sample Pathways

In a multi-age classroom, the teacher could organise the class to reflect a guided reading session with students rotating around activities, including teacher focus groups. The teacher could show the younger students the VLA and instruct them, while older students do an Investigation Card or other Activity Zone activity. Then when the younger students are set to work on student books, the older students watch the VLA.

Some sample pathways are shown on the following pages.

The Multi-age Classroom

Year 3/4 Classroom

Year 4 Topic 1 ★ Number and Place Value ★ Lesson 3: Comparing and Ordering Whole Numbers

Skills Trace

Find a year 3 lesson that complements the year 4 lesson according to the ability mix within the class.

Looking Back ★ Year 3 Lessons

- Topic 1: Number and Place Value**
- 1.1 Reading and Writing Hundreds
 - 1.2 Reading and Writing Numbers to 1 000
 - 1.3 Building Numbers Beyond 1 000
 - 1.5 Using Clues to Identify Numbers
 - 1.6 Using Place Value to Add and Subtract
 - 1.7 Ordering Three Numbers
 - 1.8 Comparing Numbers
 - 1.9 Rounding Whole Numbers

Year 4 ★ Topic 1 Lessons

- 1.1 Reading and Writing Thousands
- 1.2 Reading and Writing Larger Numbers
- 1.3 Comparing and Ordering Whole Numbers
- 1.4 Rounding Whole Numbers

Looking Ahead ★ Year 5 Lessons

- Topic 1: Number and Place Value**
- 1.1 Representing Thousands in Different Ways
 - 1.2 Representing Millions in Different Ways
 - 1.3 Comparing and Ordering Whole Numbers

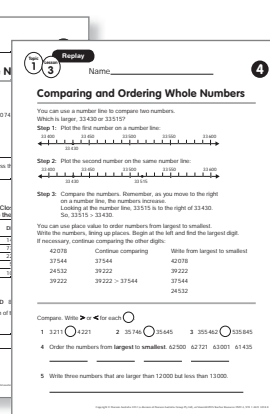

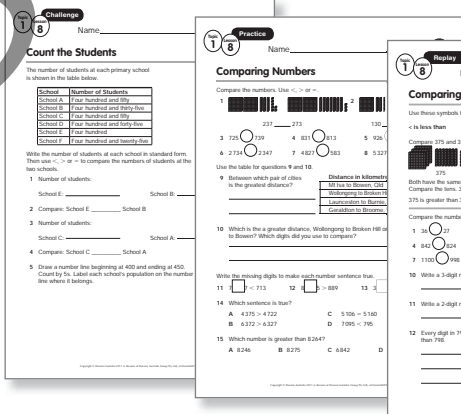

VLB/VLA Groups

Show year 3 VLA 1.8 to the whole class, then break into ability/age groups to use year 4 VLA 1.3, SAB year 4 lesson page 1.3, SAB year 3 lesson page 1.8, and year 3 and year 4 topic 1 Activity Zone cards, with or without supervision as appropriate.

Differentiated Worksheets

For extra class practice or homework: Replay, Practice or Challenge worksheets for year 3 lesson 1.8 or year 4 lesson 1.3 as appropriate.

Year 4/5 Classroom

Year 4 Topic 5 ☆ Angles and Shapes ☆ Lesson 5: Identifying 2D Shapes in Other Shapes

Skills Trace

Find a year 5 lesson that complements the year 4 lesson according to the ability mix within the class.

Looking Back Year 3 Lessons

Topic 6: Angles and Shapes

- 6.1 Understanding Lines and Line Segments
- 6.2 Introducing Angles
- 6.3 Identifying Polygons
- 6.4 Making Generalisations About Polygons
- 6.5 Identifying 3D Objects
- 6.6 Identifying Faces on 3D Objects
- 6.7 Relating 2D Shapes and 3D Objects

Year 4 Topic 6 Lessons

- 5.1 Describing Angles
- 5.2 Relating 2D Shapes and 3D Objects
- 5.3 Describing and Classifying Objects
- 5.4 Acting Out to Reason About 3D Objects
- 5.5 Identifying 2D Shapes in Other Shapes

Looking Ahead Year 5 Lessons

Topic 6: Angles and Shapes

- 6.1 Understanding Lines and Angles
- 6.2 Measuring Angles
- 6.3 Classifying Triangles
- 6.4 Classifying Quadrilaterals
- 6.5 Making and Testing Generalisations about Rectangles
- 6.6 Identifying 3D Objects
- 6.7 Understanding Polyhedrons
- 6.8 Relating 2D Shapes and 3D Objects
- 6.10 Viewing Perspectives of 3D Objects

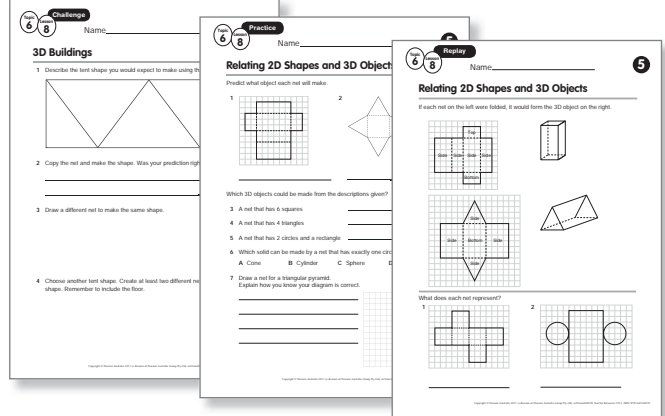

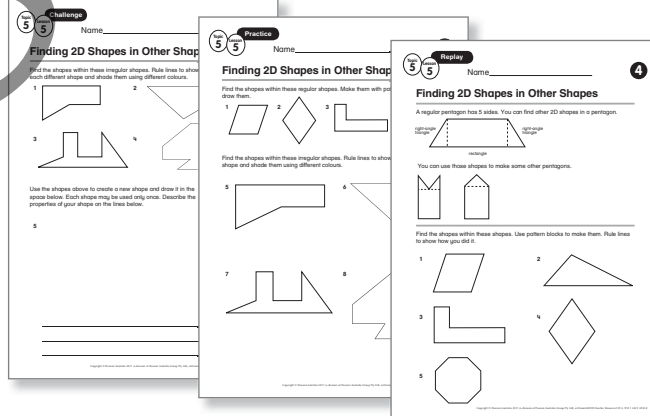

VLB/VLA Groups

Show year 4 VLA 5.5 to the whole class, then break into ability/age groups to use year 5 Video topic 6, SAB year 4 lesson page 5.5, SAB year 5 lesson page 6.8, year 4 topic 5 Activity Zone cards and year 5 topic 6 Activity Zone cards, with or without supervision as appropriate.

Differentiated Worksheets

For extra class practice or homework: Replay, Practice or Challenge worksheets for year 4 lesson 5.5 or year 5 lesson 6.8 as appropriate.

Teacher Resource Booklet

A teacher starts a topic using their set of **enVisionMATHS** Teacher Resource Booklets to assist in planning and assessment. The Maths Background section in the Teacher Resource Booklet enhances the professional development of generalist teachers and their implementation of each topic.

Each booklet contains reduced-sized copies of all components for the topic so that when working away from school, teachers need only take a lightweight booklet with them for their planning.

There is one Teacher Resource Booklet for each year 4 topic.

Skills Trace and Suggested Teaching Sequence

Looking Back: year 3 Lessons: signposts to earlier to lessons that have dealt with year 4 topics or which provide an introduction or good basis for the year 4 topic. These lessons may be useful for extra reinforcement of the topic basics.

Looking Ahead: year 5 Lessons: signposts to later lessons that deal with year 4 topics. These lessons may be useful for more able students who require further challenges.

12.7 Predicting and Comparing Outcomes

12.8 Identifying Related Events

12.9 Identifying Independent Events

Topic 12: Data, Graphs and Chance

12.1 Displaying Data From Surveys

12.2 Selecting Samples for Surveys

12.3 Interpreting Graphs

13.4 Making and Interpreting Bar and Picture Graphs

12.5 Using Line Graphs

12.6 Interpreting Line Graphs

Topic

• Teacher planning (using pages 2–11 of this booklet)

• Use Topic Opener to introduce topic (page 2)

• Pre-assessment given to students (pages 31–33)

Lessons

• Introduce each lesson by setting the purpose

• Make connections to students' previous learning (connect)

• Watch the Visual Learning Animation (VLA) and show students the Visual Learning Bridge (VLB) on the IWB or at the top of the relevant lesson page in the Student Activity Book

• Whole-class teaching focus consolidating the concept and including problem solving

• Students complete activities in the Student Activity Book

• Small-group work with students who may need further instruction (error intervention, extension); rest of class work in groups on differentiated learning centre activities from the Activity Zone that are appropriate to their level (refer to pages 6–10 of this booklet), recording their findings in the Maths Thinking Skills Book

• Whole-class reflection

• Students record reflections in the Maths Thinking Skills Book

• Differentiated worksheets used for extra practice at home or school

Assessment

• Ongoing and throughout using pages 30–36, including post-assessment (pages 34–36), observations and recorded work in the Maths Thinking Skills Book

Note

Blue text = suggested question/language for teachers to use

Pink text = answer/solution

Suggested Teaching Sequence: a best-practice example for the use of **enVisionMATHS** in the classroom. Teachers are free to adapt this sequence to best suit their classes.

Maths Background for Teachers

Maths Background for Teachers: topic-focused information designed as professional development for teachers, to fill in gaps in knowledge or to provide teaching tips for the topic.

Professional development logo: indicates material designed for professional development.

Topic Focus: a reminder of the general focus for this topic.

AC Links: a quick reference relating each lesson to the relevant content description of the Australian Curriculum: Mathematics.

Maths Background for Teachers

Topic Focus

- Fractions: A fraction can name part of a whole, part of a set or part of a segment and can have a value greater than 1.
- Mathematical processes: Doing mathematics involves a variety of processes including problem solving, reasoning, communicating, connecting and representing.
- Equivalence: Any number, measure, numerical expression, algebraic expression or equation can be represented in an infinite number of ways that have the same value.
- Algorithms: There is more than one algorithm for each of the operations with rational numbers. Most algorithms for operations with rational numbers use equivalence to transform calculations into simpler ones.

Essential Understandings

- 9.1 A fraction describes the division of a whole (region, set, segment) into equal parts. A fraction is relative to the size of the whole.
- 9.2 Mathematical explanations can be given using words, pictures, numbers or symbols. A good explanation should be correct, simple, complete and easy to understand.
- 9.3 The same fractional amount can be represented by an infinite set of different but equivalent fractions.
- 9.4 Equivalent fractions are found by multiplying or dividing the numerator and denominator by the same non-zero number.

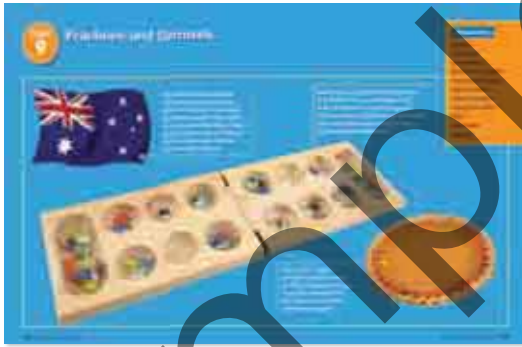

Number and Algebra

- Fractions and decimals**
 - NA058 Model and represent unit fractions including $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{5}$, $\frac{1}{8}$ and their multiples to a complete whole **9.1, 9.2, 9.5**
 - NA077 Investigate equivalent fractions used in contexts **9.2-9.4**
 - NA078 Count by quarters, halves and thirds, including with mixed numerals. Locate and represent these fractions on a number line **9.4, 9.6**
 - NA079 Recognise that the place-value system can be extended to tenths and hundredths. Make connections between fractions and decimal notation **9.7, 9.8**

About Fractions and Decimals

Topic Opener

Introduce students to the topic of fractions and decimals by focusing on the thought-provoking real-life questions and vocabulary used in the Topic Opener. Encourage students to come up with their own questions. Model the vocabulary listed in the Topic Opener and ensure students understand the terms.

Equivalent Fractions

Equivalent fractions are fractions that name the same amount. The fractions $\frac{1}{2}$ and $\frac{2}{4}$ both name the same amount and therefore are equivalent fractions.

The most elegant explanation of the process of finding equivalent fractions involves fraction multiplication.

$$\frac{1}{2} = \frac{1}{2} \times 1 = \frac{1}{2} \times \frac{2}{2} = \frac{2}{4}$$

Multiplicative Identity Property for rational numbers: $\frac{a}{b} \times \frac{c}{c} = \frac{a}{b}$ where $c \neq 0$

Even though the skill of multiplying fractions is quite easy for most students, understanding what it means to multiply two fractions is conceptually complex. Therefore, when equivalent fractions are first introduced, patterns are used to create and justify a process for finding equivalent fractions.

Fractions: Tenths and Hundredths

Working with tenths and hundredths provides practice for students in common, simple fractions and prepares for the conversions to percentages and decimals later on.

To help students convert to decimals, they first need to understand why the tenths and hundredths are needed. Whatever number is over a tenth fits in the tenths place value of a decimal (the first after a decimal point). Whatever number is over a hundredth fits in the hundredths place value of a decimal (the second after a decimal point).

| Fraction | Decimal |
|-----------------|---------|
| $\frac{1}{10}$ | 0.1 |
| $\frac{2}{100}$ | 0.02 |
| $\frac{1}{100}$ | 0.01 |

Use fraction model strips or number lines to break down tenths fractions and visualise.

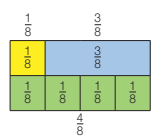

Fractions and Decimals

Converting from fractions to decimals is simple so long as the base is over a matching place value. Teach students how to turn other fractions into tenths and hundredths.

| Fraction | Decimal |
|--|---------------------------------|
| $\frac{1}{10} \times \frac{10}{10} = \frac{10}{100}$ | $\frac{10}{100} = \frac{1}{10}$ |
| $\frac{1}{10} \times \frac{10}{10} = \frac{10}{100}$ | $\frac{10}{100} = \frac{1}{10}$ |
| $\frac{1}{10} \times \frac{10}{10} = \frac{10}{100}$ | $\frac{10}{100} = \frac{1}{10}$ |

Adding Fractions

Many types of real-world actions (such as adding equal parts of a total) that can be associated with adding whole numbers can also be associated with real-world situations that involve adding fractions. Making sense of the skill of adding fractions with like denominators is not difficult if one has a firm grasp on the meaning of addition, knows how to add whole numbers, and knows the meaning of a fraction.

Fraction strip models aid students in visually understanding how the sum relates to its parts.

The picture that follows shows physical and symbolic representations for adding two fractions. The general rule for adding two fractions with like denominators is:

$$\frac{1}{8} + \frac{3}{8} = \frac{1+3}{8} = \frac{4}{8} = \frac{1}{2}$$

Students who make the mistake of adding denominators may need further help in understanding the meaning of a fraction.

2 Topic 9 Fractions and Decimals Maths Background for Teachers

Topic 9 Fractions and Decimals Maths Background for Teachers 3

Essential Understandings: the specific understandings related to each lesson in this topic.

About [the topic]: further information about the topic for both teachers and students, including suggested teaching strategies.

Teaching Tip logo: indicates specific quick teaching tips.

‘Research says that teaching for understanding results in better performance that lasts longer’ (Pesek & Kirshner, 2000).

Teacher Resource Booklet

Maths Language/Meeting Individual Needs

Vocabulary: a list of the specific new and review vocabulary that should be used within this topic, and suggestions for encouraging students to connect with this vocabulary.

ESL: strategies for encouraging effective vocabulary understandings for ESL students.

Additional Needs: strategies to suit additional needs students, emerging-level students and extending-level students.

Maths Language

Vocabulary

Language of Shapes and 3D Objects

Help students become familiar with Topic 5 terms as they relate to angles and shapes. The following terms will all be encountered in this topic.

| Review Vocabulary | New Vocabulary |
|-------------------|---------------------|
| 3D object | object |
| sphere | net |
| cylinder | edge |
| cone | face |
| cube | vertex |
| | vertices |
| | rectangular prism |
| | triangular prism |
| | rectangular pyramid |
| | square pyramid |
| | ray |
| | angle |
| | right angle |
| | acute angle |
| | obtuse angle |
| | perpendicular |

Connection to Everyday Vocabulary

Making real-life connections to vocabulary can strengthen students' understanding of mathematical terms.

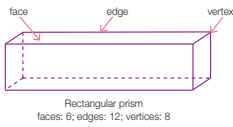

3D Objects All Around

Examples of 3D objects can be seen all around. The pyramids of Egypt are a very large example of one type of 3D object, while an ice-cream cone is an example of a 3D object you can hold in your hand.

Vocabulary Activities

Identifying 3D Objects

Give students drawings of various 3D objects and have them count the faces, edges and vertices of each and label an example of each term. Then have them identify what type of object it is.

4 Topic 5 Angles and Shapes Maths Language

Meeting Individual Needs

ESL

Considerations for ESL Students

Repeated oral language practice with the names of 2D shapes, the way they go together and their properties will help English learners remember and understand the shapes.

- Beginning** Write the words for the different shapes explored in this unit on index cards. Draw matching pictures on separate index cards. Have students match the words with the pictures.
- Intermediate** Have students do the above activity and say the words aloud.
- Advanced** Give students just the name of the shape or angle and have them draw them. And then vice versa: give them a picture of the shape and have them define it.

ESL Activity: Identifying 3D Shapes from Their 2D-Shape Prism Base

Use with Lesson 5.5

10-15 minutes

- To help students understand that a prism is based on a 2D shape that has been 'stretched' (and that is why they are named accordingly), show them examples of a:
 - rectangle
 - square
 - triangle
 - circle
- These can be drawn or shown as a net.
- Then show examples of a:
 - rectangular-based prism
 - cube (though call it a square-based prism for familiarity and then later introduce special terms)
 - triangular-based prism (use the same shape triangle as the 2D example)
 - cylinder (though call it a circle-based prism, even though this is strictly not its name).

Additional Needs

Considerations for Additional Needs Students

- Some students may understand 3D objects better if architectural elements are used to reinforce their recognition of shapes.
- Have students research and find two different 3D objects used for buildings.

Additional Needs Activity: Triangles and Side Lengths

Use with Lesson 5.4

10-15 minutes

Materials

drawing straws
scissors
glue
sheets of construction paper (per pair)

- Write the following sentences on the board. Ask students to apply each description onto a separate sheet of construction paper.
- A triangle with all sides the same length is an equilateral triangle.
- A triangle with at least two sides the same length is an isosceles triangle.
- A triangle with no sides the same length is a scalene triangle.

Have students cut straws to create the three types of triangles. Students should glue each triangle onto the paper that describes it.

A triangle with no sides the same length is a scalene triangle.

Emerging-level

Considerations for Emerging-level Students

- Provide links to familiar contexts. Some students may have difficulty recognizing and/or identifying the various 3D objects. Providing a variety of real-world examples of 3D objects may help.
- Some students may have trouble applying what's learnt. Bring a wide range of picture books and magazines into the classroom. Have students look through them for examples of 3D objects.

Emerging-level Activity: Net Recognition

Use with Lesson 5.4

10-15 minutes

Materials

nets for cone, cube, cylinder, rectangular prism, rectangular pyramid, square pyramid and triangular prism

- Provide a variety of unidentified nets for different 3D objects and have each pair of students choose two different patterns.
- As a pair, students study the patterns to determine how many faces there are and which of the faces are bases.
- Then have each student write a sentence to describe each 3D object. (Sample sentence: My object has a square base and four triangles for faces.)
- Finally have students identify each 3D object based on its net.

Extending-level

Considerations for Extending-level Students

Extend the concepts of 2D shapes by having students draw them, and come up with their own ideas.

Extending-level Activity: Creating Shapes

Use with Lesson 5.5

10-15 minutes

Instruct students:

- Work in groups of four. Each person does a step and then passes to the left.
- Draw a shape of any type that you can come up with. Use only straight lines and at least some regular angles. Use a maximum of eight sides.
- Pass to the left.
- Looking at your classmate's picture, try to find a shape within it using at least two sides of their shape.
- Draw the shape inside the first shape.
- Pass to the left again.
- Repeat; find another shape either from the outside lines OR joining to the second person's lines. Draw the shape.
- Pass to the left again.
- Draw any remaining shapes you can identify.
- Pass to the left; this should be back to the person who drew the original shape.
- Cut them all out.
- Are any shapes similar to the pictures the other groups drew? What does this tell you about the shapes that are found within other shapes?

Students have the opportunity to discuss the numerous ways of breaking up a shape. When irregular shapes are used, the number of ways is increased substantially; however, common shapes will still likely show up. Discuss this in light of Lesson 5.5.

Topic 5 Angles and Shapes Meeting Individual Needs 5

Activity icons (clock and student numbers): suggestions for how activities could be structured and how much time might be needed for each one.

'Research says there are a number of effective strategies for teaching math to English learners. These include strategies to enhance reading, writing, speaking and listening' (Cuevas et al. 1986).

'Research says that students learn best when instruction is designed to accommodate diverse types of learner' (Fillmore and Meyer, 1996).

Activity Zone

Each Activity Zone card is reproduced in the Teacher Resource Booklet for ease of planning, together with the relevant Maths Thinking Skills Book pages.

enVision Games Cards

enVision Minds Cards

enVision Investigations Cards

enVision Digital Cards

enVision Minds

The ability to compute mentally is a critical aspect of being a numerate person. The National Numeracy Review (Commonwealth of Australia, 2008) makes a clear distinction between mathematics and numeracy, where numeracy is defined as the ability to cross the bridge between mathematical skills and their use in the context of real life. In other words, mathematics skills provide the tools, and the numerate person is able to use these tools to function effectively in everyday life and work.

An important skill to support mental computation is the ability to recall number facts with fluency. However, students must have a strong foundational understanding of the underpinning concepts before fluency can be built upon. The enVision Minds cards consist of two components: mental computation strategies and fluency quizzes. Mental computation strategies should be explicitly taught when unpacking each specific concept. The fluency quizzes should be used to practice and consolidate concepts covered during the topic.

On the front of the "Using Addition to Solve Subtraction (Counting On)" and "Counting Backwards by 100s" cards, there are simple real-world examples and activities to perform in groups or pairs. These help students understand the real-life applications and contain mental computation activities. The reverse of the cards have quizzes to consolidate concepts covered in the topic. Students should be encouraged to reflect on and record their understandings using pages 2-14 in their Maths Thinking Skills Book.

A fun and engaging way of doing the activity on card A with the whole class is to have each student count a number until you reach the number in question. For example, for $81 + 53$, the first student would say 81, then the second would say 91, then 101, then 111, then 121, then 131, then 141. The person who finishes needs to then say something like "the end" so they know to stop counting. They can then look around and see how many people added to know how many tens. [There would have been five people adding 10 and one person adding 3.]

Remind students how to count backwards with tens before introducing counting backwards by hundreds.

Subtraction Concepts and Strategies enVision Minds Cards

enVision Minds Pages from Maths Thinking Skills Book

6 Topic 3 Subtraction Concepts and Strategies enVision Minds

enVision Investigations

The enVision Investigations emphasise estimation, numerical reasoning, communicating in mathematics and questioning skills. Students often believe that worded problems have only one correct answer and that the answer can only be derived in one way. The enVision Investigations encourage multiple approaches, emphasise process rather than finding the correct answer and promote reasonableness and the use of problem-solving strategies.

Each enVision topic has a range of investigations that allow students to explore the concepts covered in each lesson. These investigations can be used during the small-group interaction component of each lesson, and can be extended from one lesson to another if appropriate. Students should be encouraged to extend their investigations through a discovery learning approach, where they have the opportunity to pursue areas of interest arising from the initial investigation. Students should be encouraged to record their thinking processes and mathematical discoveries in the Maths Thinking Skills Book (pages 15-44). They initially record their work on the more structured investigations pages, then graduate to the less structured range of pages that follow.

Some of the activities may be suitable in small groups or as whole-class activities. Alternatively, divide up the class and have groups do different activities and report back to the class with their investigations and results. Highlight these investigations will take longer than a session. Clarify with students how to perform a "difference" calculation before being actively. Help students to be systematic with their investigation summaries and make comparisons across Card A investigations 1 and 2, and Card B investigations 1 and 2.

Subtraction Concepts and Strategies enVision Investigations Cards

enVision Investigation Pages from Maths Thinking Skills Book

10 Topic 3 Subtraction Concepts and Strategies enVision Investigations

enVision Games

... involvement in instructional games induces children to make sense of their ideas and the interpretations of others ... In turn, these problems engender an exchange of ideas with children striving to make sense of their mathematical activity and lead them to see mathematics as a social process of sense making requiring the construction of consensual mathematical understandings.

(Booker et al. 2010, p. 29)

When introducing the enVision Games for each topic, it is important to highlight explicitly the mathematical concepts that the games are based upon. When students know the mathematics being explored during a game, they are better equipped to reflect upon their learning once the game is over. After playing the game, students should be encouraged to record their reflections in the Maths Thinking Skills Book (pages 45-54) by writing the strategies they used, or suggesting alternative ways of playing or improvements that could be made to each game.

All games need to be performed in pairs or groups. Games are a great opportunity not only to improve knowledge but to encourage students to enjoy learning maths with their peers.

Each Games card has two differentiated versions: ★ at least, ★★ more advanced.

Subtraction Concepts and Strategies enVision Games Cards

enVision Games Pages from Maths Thinking Skills Book

8 Topic 3 Subtraction Concepts and Strategies enVision Games

enVision Digital

A pedagogically rich classroom is one in which a range of technologies, hands-on materials, pencil and paper, group work and discussion is used depending on the topic and desired outcomes.

(Booker et al. 2010, p. 37)

The Australian Curriculum: Mathematics recognises that young people need to be highly skilled in ICT and promotes the value of embedding ICT learning rather than having it as an optional extra. The enVision Digital cards utilise Tools4Maths to explore and deepen understanding of the topic being studied. This allows for natural, integrated learning of both the mathematics and ICT concepts.

Students should have prior experiences using concrete manipulatives, including place-value blocks. Counting on in decades and off-decades, hundreds and off-hundreds is an important learning experience prior to the task. Backwards number counting in decades and off-decades, hundreds and off-hundreds helps to increase the robustness of students' concept of number sequences. Repeated subtraction of a visual representation of a number by using the Crossing Out tool in Tools4Maths, along with verbalising the number displayed by the Maths Mats, is a valuable strategy to help students' learning.

Subtraction Concepts and Strategies enVision Digital Cards

These cards are designed to be used with Tools4Maths.

10 Topic 3 Subtraction Concepts and Strategies enVision Digital

Teacher Resource Booklet

Lesson Page

Each Student Activity Book lesson page is reproduced in full in the relevant Teacher Resource booklet, with annotations to simplify lesson planning.

Topic and lesson identifier

Understanding the Concept icon: indicates text where the main lesson concept is outlined and explained.

Student Activity Book page: The relevant SAB page is reproduced in full here (with answers shown in pink). This allows teachers to plan lessons easily without needing to access copies of all program components.

Visual Learning Bridge (VLB): A VLB is shown at the start of the lesson in the Student Activity Book and also appears here in the Teacher Resource Booklet along with guiding questions in blue type and expected sample answers in pink. The VLB is a pictorial, step-by-step bridge between the interactive learning activity and the lesson exercises. It helps students focus on one idea at a time as well as see connections within a sequence of ideas. This is especially helpful for visual learners and English-language learners. Visual Learning Animations (VLAs) can be used to present the Visual Learning Bridge digitally with animation. These VLAs are on the IWB DVD.

Problem solving: problem-solving activities related to each lesson. These can be set as individual student tasks or done as whole-class activities. These activities are based on the following problem-solving process:

- Read and Understand: What am I trying to find? What do I know?
- Plan and Solve: What strategy or strategies should I try? Can I show the problem? How will I solve the problem? What is the answer?
- Look Back and Check: Did I check my work? Is my answer reasonable?

Expanded answers and teaching notes are provided for each problem-solving question.

Topic 3

Lesson 7

Subtracting with Zero

Student Activity Book Pages

Understanding the Concept

Before you subtract, how can you estimate the difference? [Use compatible numbers to subtract. For example: $300 - 150 = 150$] You are subtracting 178 from 305. What digit is in the tens place of the number 305? [0]

Why do you regroup a hundred instead of a ten to subtract ones? [There are no tens to regroup.]

After you regroup one hundred into 10 tens, can you subtract? [No. You still need to regroup 1 ten into 10 ones.]

How can you use addition to check the answer? [$127 + 178 = 305$]

Understand it!

More than one regrouping may be needed to subtract from a number with a zero.

Visual Learning Bridge (VLB)

Subtracting with Zero

How do you subtract from a number with one or more zeroes?

How much more money does the art club need?

$$\begin{array}{r} 305 \\ - 178 \\ \hline \end{array}$$

Another Example

How do you subtract from a number with two zeroes?

Find $600 - 164$.

$$\begin{array}{r} 600 \\ - 164 \\ \hline \end{array}$$

Guided Practice

Find the difference.

$$\begin{array}{r} 402 \\ - 139 \\ \hline 263 \end{array}$$

$$\begin{array}{r} 300 \\ - 157 \\ \hline 143 \end{array}$$

$$\begin{array}{r} 607 \\ - 439 \\ \hline 168 \end{array}$$

$$\begin{array}{r} 820 \\ - 157 \\ \hline 663 \end{array}$$

Reasoning

5 In the examples above, why do you write 10 above the 0 in the tens place?

There are no tens in 305 to regroup, so 1 hundred is regrouped instead into 10 tens.

Independent Practice

Fill in the missing number to make these number stories true.

$$\begin{array}{r} 203 \\ - 53 \\ \hline 150 \end{array}$$

$$\begin{array}{r} 400 \\ - 355 \\ \hline 45 \end{array}$$

$$\begin{array}{r} 500 \\ - 64 \\ \hline 436 \end{array}$$

$$\begin{array}{r} 306 \\ - 248 \\ \hline 58 \end{array}$$

Problem Solving

11a Dina counted 204 items on the library trolley. There were 91 fiction books, 75 non-fiction books and some magazines. How many magazines were there?

11b How many items were not fiction books?

Problem Solving

11a 38 items were magazines. 91 fiction books added to 75 non-fiction books totals 166 items. The difference between 204 and 166 is 38.

11b 113 items were not fiction books. There are two ways this could have been solved. Find the difference between 91 and 204 or find the sum of the magazines and non-fiction books. [113] Discuss with the students whether one way is more efficient than the other and why.

24 Topic 3 Subtraction Concepts and Strategies Subtracting with Zero

Maths Background for Teachers: a brief, straightforward, lesson-specific masterclass for teachers.

48 ★ Instructional Design Teacher Resource Booklet

Topic Focus: clarifies and explains the overall mathematical focus for the lesson.

Quick and Easy Lesson Overview: at-a-glance overview of the lesson including the objective, the essential understanding, the new vocabulary and any materials required.

Topic Focus

There is more than one algorithm for each of the operations with rational numbers. Most algorithms for operations with rational numbers, using both mental maths and paper and pencil, use equivalence to transform calculations into simpler ones.

Quick and Easy Lesson Overview

Objective

Students subtract 3-digit numbers using paper-and-pencil methods and use subtraction to solve problems.

Essential Understanding

Place-value relationships can help simplify subtracting across zero.

Vocabulary

regroup

Maths Background for Teachers

Subtracting across zeroes follows the same basic steps of normal subtraction. However, this special case requires more than one regrouping since it is impossible to regroup zero units as a whole number of smaller units.

To find $600 - 217$, write each number in expanded form then regroup until the digit in each place is larger than the number you are subtracting from.

$$\begin{aligned} 600 &= 500 + 100 \\ &= 500 + 90 + 10 \\ &= 5 \text{ hundreds} + 9 \text{ tens} + 10 \text{ ones} \\ 217 &= 200 + 10 + 7 \\ &= 2 \text{ hundreds} + 9 \text{ tens} + 7 \text{ ones} \end{aligned}$$

Then rewrite the exercise and subtract.

| | | | |
|-------|--------------|---------|----------|
| 600 | 5 hundreds | 9 tens | 10 ones |
| - 217 | - 2 hundreds | - 1 ten | - 7 ones |
| 383 | 3 hundreds | 8 tens | 3 ones |

Set the Purpose

In this lesson you will learn how to subtract from a number with one or more zeroes.

Differentiated Worksheets

Provide spare paper to help students completing the Replay worksheet. Encourage the students attempting the Challenge worksheet to explain their working and to check their answers.

Replay

Subtracting with Zero

To subtract from a number with 0 in the tens place, you need to regroup one hundred into 10 tens.

Find $207 - 18$.

Step 1: Subtract as usual. Since there is a 0 in the tens place, regroup one hundred into 10 tens.

Step 2: Regroup the hundreds. 2 hundreds becomes 1 hundred and 10 tens.

Step 3: Subtract the tens. 10 tens minus 1 ten is 9 tens. 7 ones minus 8 ones is not possible, so regroup one ten into 10 ones. 10 ones minus 8 ones is 2 ones.

So $207 - 18 = 189$.

Is your answer correct? Check by adding: $189 + 18 = 207$.

Find each difference.

| | | | | |
|---------------------|---------------------|---------------------|---------------------|----------------------|
| 1. $101 - 2 = 99$ | 2. $100 - 1 = 99$ | 3. $100 - 2 = 98$ | 4. $100 - 3 = 97$ | 5. $100 - 4 = 96$ |
| 6. $200 - 10 = 190$ | 7. $200 - 20 = 180$ | 8. $300 - 10 = 290$ | 9. $300 - 20 = 280$ | 10. $400 - 10 = 390$ |

11. Find the difference between 200 and 10. $200 - 10 = 190$

12. Find the difference between 300 and 20. $300 - 20 = 280$

13. Find the difference between 400 and 30. $400 - 30 = 370$

14. Find the difference between 500 and 40. $500 - 40 = 460$

15. Find the difference between 600 and 50. $600 - 50 = 550$

16. Find the difference between 700 and 60. $700 - 60 = 640$

17. Find the difference between 800 and 70. $800 - 70 = 730$

18. Find the difference between 900 and 80. $900 - 80 = 820$

19. Find the difference between 1000 and 90. $1000 - 90 = 910$

20. Find the difference between 1100 and 100. $1100 - 100 = 1000$

21. Find the difference between 1200 and 200. $1200 - 200 = 1000$

22. Find the difference between 1300 and 300. $1300 - 300 = 1000$

23. Find the difference between 1400 and 400. $1400 - 400 = 1000$

24. Find the difference between 1500 and 500. $1500 - 500 = 1000$

25. Find the difference between 1600 and 600. $1600 - 600 = 1000$

26. Find the difference between 1700 and 700. $1700 - 700 = 1000$

27. Find the difference between 1800 and 800. $1800 - 800 = 1000$

28. Find the difference between 1900 and 900. $1900 - 900 = 1000$

29. Find the difference between 2000 and 1000. $2000 - 1000 = 1000$

30. Find the difference between 2100 and 1100. $2100 - 1100 = 1000$

31. Find the difference between 2200 and 1200. $2200 - 1200 = 1000$

32. Find the difference between 2300 and 1300. $2300 - 1300 = 1000$

33. Find the difference between 2400 and 1400. $2400 - 1400 = 1000$

34. Find the difference between 2500 and 1500. $2500 - 1500 = 1000$

35. Find the difference between 2600 and 1600. $2600 - 1600 = 1000$

36. Find the difference between 2700 and 1700. $2700 - 1700 = 1000$

37. Find the difference between 2800 and 1800. $2800 - 1800 = 1000$

38. Find the difference between 2900 and 1900. $2900 - 1900 = 1000$

39. Find the difference between 3000 and 2000. $3000 - 2000 = 1000$

40. Find the difference between 3100 and 2100. $3100 - 2100 = 1000$

41. Find the difference between 3200 and 2200. $3200 - 2200 = 1000$

42. Find the difference between 3300 and 2300. $3300 - 2300 = 1000$

43. Find the difference between 3400 and 2400. $3400 - 2400 = 1000$

44. Find the difference between 3500 and 2500. $3500 - 2500 = 1000$

45. Find the difference between 3600 and 2600. $3600 - 2600 = 1000$

46. Find the difference between 3700 and 2700. $3700 - 2700 = 1000$

47. Find the difference between 3800 and 2800. $3800 - 2800 = 1000$

48. Find the difference between 3900 and 2900. $3900 - 2900 = 1000$

49. Find the difference between 4000 and 3000. $4000 - 3000 = 1000$

50. Find the difference between 4100 and 3100. $4100 - 3100 = 1000$

51. Find the difference between 4200 and 3200. $4200 - 3200 = 1000$

52. Find the difference between 4300 and 3300. $4300 - 3300 = 1000$

53. Find the difference between 4400 and 3400. $4400 - 3400 = 1000$

54. Find the difference between 4500 and 3500. $4500 - 3500 = 1000$

55. Find the difference between 4600 and 3600. $4600 - 3600 = 1000$

56. Find the difference between 4700 and 3700. $4700 - 3700 = 1000$

57. Find the difference between 4800 and 3800. $4800 - 3800 = 1000$

58. Find the difference between 4900 and 3900. $4900 - 3900 = 1000$

59. Find the difference between 5000 and 4000. $5000 - 4000 = 1000$

60. Find the difference between 5100 and 4100. $5100 - 4100 = 1000$

61. Find the difference between 5200 and 4200. $5200 - 4200 = 1000$

62. Find the difference between 5300 and 4300. $5300 - 4300 = 1000$

63. Find the difference between 5400 and 4400. $5400 - 4400 = 1000$

64. Find the difference between 5500 and 4500. $5500 - 4500 = 1000$

65. Find the difference between 5600 and 4600. $5600 - 4600 = 1000$

66. Find the difference between 5700 and 4700. $5700 - 4700 = 1000$

67. Find the difference between 5800 and 4800. $5800 - 4800 = 1000$

68. Find the difference between 5900 and 4900. $5900 - 4900 = 1000$

69. Find the difference between 6000 and 5000. $6000 - 5000 = 1000$

70. Find the difference between 6100 and 5100. $6100 - 5100 = 1000$

71. Find the difference between 6200 and 5200. $6200 - 5200 = 1000$

72. Find the difference between 6300 and 5300. $6300 - 5300 = 1000$

73. Find the difference between 6400 and 5400. $6400 - 5400 = 1000$

74. Find the difference between 6500 and 5500. $6500 - 5500 = 1000$

75. Find the difference between 6600 and 5600. $6600 - 5600 = 1000$

76. Find the difference between 6700 and 5700. $6700 - 5700 = 1000$

77. Find the difference between 6800 and 5800. $6800 - 5800 = 1000$

78. Find the difference between 6900 and 5900. $6900 - 5900 = 1000$

79. Find the difference between 7000 and 6000. $7000 - 6000 = 1000$

80. Find the difference between 7100 and 6100. $7100 - 6100 = 1000$

81. Find the difference between 7200 and 6200. $7200 - 6200 = 1000$

82. Find the difference between 7300 and 6300. $7300 - 6300 = 1000$

83. Find the difference between 7400 and 6400. $7400 - 6400 = 1000$

84. Find the difference between 7500 and 6500. $7500 - 6500 = 1000$

85. Find the difference between 7600 and 6600. $7600 - 6600 = 1000$

86. Find the difference between 7700 and 6700. $7700 - 6700 = 1000$

87. Find the difference between 7800 and 6800. $7800 - 6800 = 1000$

88. Find the difference between 7900 and 6900. $7900 - 6900 = 1000$

89. Find the difference between 8000 and 7000. $8000 - 7000 = 1000$

90. Find the difference between 8100 and 7100. $8100 - 7100 = 1000$

91. Find the difference between 8200 and 7200. $8200 - 7200 = 1000$

92. Find the difference between 8300 and 7300. $8300 - 7300 = 1000$

93. Find the difference between 8400 and 7400. $8400 - 7400 = 1000$

94. Find the difference between 8500 and 7500. $8500 - 7500 = 1000$

95. Find the difference between 8600 and 7600. $8600 - 7600 = 1000$

96. Find the difference between 8700 and 7700. $8700 - 7700 = 1000$

97. Find the difference between 8800 and 7800. $8800 - 7800 = 1000$

98. Find the difference between 8900 and 7900. $8900 - 7900 = 1000$

99. Find the difference between 9000 and 8000. $9000 - 8000 = 1000$

100. Find the difference between 9100 and 8100. $9100 - 8100 = 1000$

101. Find the difference between 9200 and 8200. $9200 - 8200 = 1000$

102. Find the difference between 9300 and 8300. $9300 - 8300 = 1000$

103. Find the difference between 9400 and 8400. $9400 - 8400 = 1000$

104. Find the difference between 9500 and 8500. $9500 - 8500 = 1000$

105. Find the difference between 9600 and 8600. $9600 - 8600 = 1000$

106. Find the difference between 9700 and 8700. $9700 - 8700 = 1000$

107. Find the difference between 9800 and 8800. $9800 - 8800 = 1000$

108. Find the difference between 9900 and 8900. $9900 - 8900 = 1000$

109. Find the difference between 10000 and 9000. $10000 - 9000 = 1000$

110. Find the difference between 10100 and 9100. $10100 - 9100 = 1000$

111. Find the difference between 10200 and 9200. $10200 - 9200 = 1000$

112. Find the difference between 10300 and 9300. $10300 - 9300 = 1000$

113. Find the difference between 10400 and 9400. $10400 - 9400 = 1000$

114. Find the difference between 10500 and 9500. $10500 - 9500 = 1000$

115. Find the difference between 10600 and 9600. $10600 - 9600 = 1000$

116. Find the difference between 10700 and 9700. $10700 - 9700 = 1000$

117. Find the difference between 10800 and 9800. $10800 - 9800 = 1000$

118. Find the difference between 10900 and 9900. $10900 - 9900 = 1000$

119. Find the difference between 11000 and 10000. $11000 - 10000 = 1000$

120. Find the difference between 11100 and 10100. $11100 - 10100 = 1000$

121. Find the difference between 11200 and 10200. $11200 - 10200 = 1000$

122. Find the difference between 11300 and 10300. $11300 - 10300 = 1000$

123. Find the difference between 11400 and 10400. $11400 - 10400 = 1000$

124. Find the difference between 11500 and 10500. $11500 - 10500 = 1000$

125. Find the difference between 11600 and 10600. $11600 - 10600 = 1000$

126. Find the difference between 11700 and 10700. $11700 - 10700 = 1000$

127. Find the difference between 11800 and 10800. $11800 - 10800 = 1000$

128. Find the difference between 11900 and 10900. $11900 - 10900 = 1000$

129. Find the difference between 12000 and 11000. $12000 - 11000 = 1000$

130. Find the difference between 12100 and 11100. $12100 - 11100 = 1000$

131. Find the difference between 12200 and 11200. $12200 - 11200 = 1000$

132. Find the difference between 12300 and 11300. $12300 - 11300 = 1000$

133. Find the difference between 12400 and 11400. $12400 - 11400 = 1000$

134. Find the difference between 12500 and 11500. $12500 - 11500 = 1000$

135. Find the difference between 12600 and 11600. $12600 - 11600 = 1000$

136. Find the difference between 12700 and 11700. $12700 - 11700 = 1000$

137. Find the difference between 12800 and 11800. $12800 - 11800 = 1000$

138. Find the difference between 12900 and 11900. $12900 - 11900 = 1000$

139. Find the difference between 13000 and 12000. $13000 - 12000 = 1000$

140. Find the difference between 13100 and 12100. $13100 - 12100 = 1000$

141. Find the difference between 13200 and 12200. $13200 - 12200 = 1000$

142. Find the difference between 13300 and 12300. $13300 - 12300 = 1000$

143. Find the difference between 13400 and 12400. $13400 - 12400 = 1000$

144. Find the difference between 13500 and 12500. $13500 - 12500 = 1000$

145. Find the difference between 13600 and 12600. $13600 - 12600 = 1000$

146. Find the difference between 13700 and 12700. $13700 - 12700 = 1000$

147. Find the difference between 13800 and 12800. $13800 - 12800 = 1000$

148. Find the difference between 13900 and 12900. $13900 - 12900 = 1000$

149. Find the difference between 14000 and 13000. $14000 - 13000 = 1000$

150. Find the difference between 14100 and 13100. $14100 - 13100 = 1000$

151. Find the difference between 14200 and 13200. $14200 - 13200 = 1000$

152. Find the difference between 14300 and 13300. $14300 - 13300 = 1000$

153. Find the difference between 14400 and 13400. $14400 - 13400 = 1000$

154. Find the difference between 14500 and 13500. $14500 - 13500 = 1000$

155. Find the difference between 14600 and 13600. $14600 - 13600 = 1000$

156. Find the difference between 14700 and 13700. $14700 - 13700 = 1000$

157. Find the difference between 14800 and 13800. $14800 - 13800 = 1000$

158. Find the difference between 14900 and 13900. $14900 - 13900 = 1000$

159. Find the difference between 15000 and 14000. $15000 - 14000 = 1000$

160. Find the difference between 15100 and 14100. $15100 - 14100 = 1000$

161. Find the difference between 15200 and 14200. $15200 - 14200 = 1000$

162. Find the difference between 15300 and 14300. $15300 - 14300 = 1000$

163. Find the difference between 15400 and 14400. $15400 - 14400 = 1000$

164. Find the difference between 15500 and 14500. $15500 - 14500 = 1000$

165. Find the difference between 15600 and 14600. $15600 - 14600 = 1000$

166. Find the difference between 15700 and 14700. $15700 - 14700 = 1000$

167. Find the difference between 15800 and 14800. $15800 - 14800 = 1000$

168. Find the difference between 15900 and 14900. $15900 - 14900 = 1000$

169. Find the difference between 16000 and 15000. $16000 - 15000 = 1000$

170. Find the difference between 16100 and 15100. $16100 - 15100 = 1000$

171. Find the difference between 16200 and 15200. $16200 - 15200 = 1000$

172. Find the difference between 16300 and 15300. $16300 - 15300 = 1000$

173. Find the difference between 16400 and 15400. $16400 - 15400 = 1000$

174. Find the difference between 16500 and 15500. $16500 - 15500 = 1000$

175. Find the difference between 16600 and 15600. $16600 - 15600 = 1000$

176. Find the difference between 16700 and 15700. $16700 - 15700 = 1000$

177. Find the difference between 16800 and 15800. $16800 - 15800 = 1000$

178. Find the difference between 16900 and 15900. $16900 - 15900 = 1000$

179. Find the difference between 17000 and 16000. $17000 - 16000 = 1000$

180. Find the difference between 17100 and 16100. $17100 - 16100 = 1000$

181. Find the difference between 17200 and 16200. $17200 - 16200 = 1000$

182. Find the difference between 17300 and 16300. $17300 - 16300 = 1000$

183. Find the difference between 17400 and 16400. $17400 - 16400 = 1000$

184. Find the difference between 17500 and 16500. $17500 - 16500 = 1000$

185. Find the difference between 17600 and 16600. $17600 - 16600 = 1000$

186. Find the difference between 17700 and 16700. $17700 - 16700 = 1000$

187. Find the difference between 17800 and 16800. $17800 - 16800 = 1000$

188. Find the difference between 17900 and 16900. $17900 - 16900 = 1000$

189. Find the difference between 18000 and 17000. $18000 - 17000 = 1000$

190. Find the difference between 18100 and 17100. $18100 - 17100 = 1000$

191. Find the difference between 18200 and 17200. $18200 - 17200 = 1000$

192. Find the difference between 18300 and 17300. $18300 - 17300 = 1000$

193. Find the difference between 18400 and 17400. $18400 - 17400 = 1000$

194. Find the difference between 18500 and 17500. $18500 - 17500 = 1000$

195. Find the difference between 18600 and 17600. $18600 - 17600 = 1000$

196. Find the difference between 18700 and 17700. $18700 - 17700 = 1000$

197. Find the difference between 18800 and 17800. $18800 - 17800 = 1000$

198. Find the difference between 18900 and 17900. $18900 - 17900 = 1000$

199. Find the difference between 19000 and 18000. $19000 - 18000 = 1000$

200. Find the difference between 19100 and 18100. $19100 - 18100 = 1000$

201. Find the difference between 19200 and 18200. $19200 - 18200 = 1000$

202. Find the difference between 19300 and 18300. $19300 - 18300 = 1000$

203. Find the difference between 19400 and 18400. $19400 - 18400 = 1000$

204. Find the difference between 19500 and 18500. $19500 - 18500 = 1000$

205. Find the difference between 19600 and 18600. $19600 - 18600 = 1000$

206. Find the difference between 19700 and 18700. $19700 - 18700 = 1000$

207. Find the difference between 19800 and 18800. $19800 - 18800 = 1000$

208. Find the difference between 19900 and 18900. $19900 - 18900 = 1000$

209. Find the difference between 20000 and 19000. $20000 - 19000 = 1000$

210. Find the difference between 20100 and 19100. $20100 - 19100 = 1000$

211. Find the difference between 20200 and 19200. $20200 - 19200 = 1000$

212. Find the difference between 20300 and 19300. $20300 - 19300 = 1000$

213. Find the difference between 20400 and 19400. $20400 - 19400 = 1000$

214. Find the difference between 20500 and 19500. $20500 - 19500 = 1000$

215. Find the difference between 20600 and 19600. $20600 - 19600 = 1000$

216. Find the difference between 20700 and 19700. $20700 - 19700 = 1000$

217. Find the difference between 20800 and 19800. $20800 - 19800 = 1000$

218. Find the difference between 20900 and 19900. $20900 - 19900 = 1000$

219. Find the difference between 21000 and 20000. $21000 - 20000 = 1000$

220. Find the difference between 21100 and 20100. $21100 - 20100 = 1000$

221. Find the difference between 21200 and 20200. $21200 - 20200 = 1000$

222. Find the difference between 21300 and 20300. $21300 - 20300 = 1000$

223. Find the difference between 21400 and 20400. $21400 - 20400 = 1000$

224. Find the difference between 21500 and 20500. $21500 - 20500 = 1000$

225. Find the difference between 21600 and 20600. $21600 - 20600 = 1000$

226. Find the difference between 21700 and 20700. $21700 - 20700 = 1000$

227. Find the difference between 21800 and 20800. $21800 - 208$

Assessment

Overview of Assessment:
an outline of the different assessments possible within enVisionMATHS.

Mathematics Concepts:
concepts addressed throughout the topic that form the basis of the diagnostic assessment. There are three to five concepts per topic.

Observable skills: specific to each lesson.

Overview of Assessment

The focus of assessment in enVisionMATHS is both formative and summative assessment.

Assessment should be more than merely a test at the end of instruction to see how students perform ... it should be an integral part of instruction that informs and guides teachers as they make instructional decisions. Assessment should not merely be done to students; rather, it should also be done for students, to guide and enhance their learning.

(NCTM 2000, p. 22)

The formative assessment tools are used to determine students' achievements, resulting in action plans, for both teacher and student, in the pursuit of further learning. The summative assessment tools are used to determine an overall measure of achievement at the end of a topic. Assessments focus on the following concepts.

Maths Concepts for Number and Place Value

- 1 Thousands (Lesson 1.1)
- 2 Larger Numbers (Lesson 1.2)
- 3 Comparing and Ordering (Lessons 1.3 and 1.4)

Formative Assessment

Pre-assessment for Each Maths Concept Within the Topic

This pre-assessment helps to gauge the ability of the students in a particular area of mathematics, providing information about a student's strengths and weaknesses.

The results of this assessment guide and support teachers in customising instruction for individual student needs. This form of assessment should be administered at the beginning of each topic. It covers both prerequisite material and new content.

There are four questions in each pre-assessment: Q1 multiple choice; Q2 short answer; Q3 reasoning; and Q4 problem solving.

During a Lesson

- Error intervention
- Prevent misconceptions
- Small-group interaction
- Differentiated worksheets

Summative Assessment

Post-assessment for Each Maths Concept Within the Topic

The post-assessment provides teachers with information about a student's achievement on a particular topic that has just been studied. These results help the teacher determine whether a student requires revision or intervention in that topic. It also allows teachers to chart a student's progress from the beginning of the topic to the end, and gives them information to report back to parents.

There are four questions in each post-assessment: Q1 multiple choice; Q2 short answer; Q3 reasoning; and Q4 problem solving.

Assessment Formats

Each of these assessments incorporates a range of assessment styles. Different approaches to and formats for assessment are required to measure the mathematical knowledge, skills and attitudes of students.

Multiple Choice

Multiple-choice assessment is helpful for teachers wanting to implement a quick and practical assessment task for students. These tests measure students' levels of mathematical fluency and allow a quick and direct opportunity for teachers to

identify strengths and weaknesses in their students' maths ability. The multiple-choice style of assessment also reflects that which is used for NAPLAN at Years 3, 5, 7 and 9.

Short Answer (Free Response)

Free-response assessment helps to eliminate guessing the correct answer. Students answer a question and may have the opportunity to represent their answer pictorially.

These questions can be more open-ended but not too wordy as they could restrict some students' access to maths learning due to language barriers.

Reasoning

Students' reasoning includes their capacity for logical thought and actions such as analysing, proving, evaluating, explaining, inferring, justifying and generalising. The reasoning questions ask students to demonstrate their level of understanding by explaining their thinking behind their choices. This allows teachers to elicit a wealth of information even though the assessment instrument is a written test. Information on students' reasoning makes it possible to identify misconceptions and inconsistencies. It allows the teacher to identify emerging ideas in students' thinking so they can be clarified, shared and formalised.

Problem Solving

Problem-solving assessment allows students to demonstrate their problem-solving skills by applying various mathematical problem-solving techniques to non-routine problems. Students are assessed on how they organise information, decode graphic representations, make generalisations and justify conclusions from data.

The problem-solving assessment questions appear at the end of each assessment so students have to think about which maths tools or processes they need to apply to formulate their answers.

Diagnostic Assessments on DVD

The diagnostic pre- and post-assessments are also found on the Teacher Resource DVD for Year 4. While teachers may wish to simply photocopy and administer each assessment as it appears in the following pages, the DVD format allows teachers to select and print PDFs of pre- and post-assessments for Year 3, 4 or 5.

Further Assessment

Other opportunities for assessment throughout the program include:

- observation of a student's attitude and ability in maths classes
- problem-solving discussion based on each lesson's problems; for example, identifying and comparing approaches to answers by students
- a record of each student's maths thinking in the various sections of the Maths Thinking Skills Book, including self-assessment through reflection activities.

Observable Skills for Number and Place Value

- Reads and writes numbers up to six digits
- Reads and writes numbers in the thousands
- Compares and orders numbers
- Rounds whole numbers to tens and hundreds
- Uses reasoning to compare numbers

'Research says that ongoing assessment prevents misconceptions and provides valuable information to guide data-driven instruction' (Vye et al., 1998).

Diagnostic Pre-assessment: copyable concept-based test to be provided to students at the start of a topic. There is a Pre-assessment for each concept related to the topic.

These assessments have been designed and placed on the page to facilitate copying. They are also available on the Teacher Resource DVD.

Diagnostic Post-assessment: copyable concept-based test to assess understanding and proficiency at the end of a topic. There is one Post-assessment for each concept related to the topic.

These assessments have been designed and placed on the page to facilitate copying. They are also available on the Teacher Resource DVD.

Topic 1 Number and Place Value

Pre-assessment

Name

Concept 2: Larger Numbers

1 Identify which one does not have the same value in the following.

a ☐ 435

b ☐ 2520

c ☐ 157 203 + 13

☐ 35 + 400

☐ 2 250 + 270

☐ 300 + 156 916

☐ 55 + 390

☐ 2 070 + 450

☐ 157 214

☐ 350 + 85

☐ 990 + 1 330

☐ 157 216

2 What is 32 + 635?

3 What number do you round up with? Why?

4 There were 1 429 people who attended an event each day for 2 days, and then 1 422 people who attended on the last day. How many people attended across the 3 days?

Show your answer with place-value blocks.

Topic 1 Number and Place Value

Post-assessment

Name

Concept 3: Comparing and Ordering

1 Which group of numbers are in order from smallest to largest?

a ☐ 31, 32, 33, 34

b ☐ 741, 742, 743, 740

c ☐ 1, 4, 7, 1

☐ 31, 31, 31, 31

☐ 740, 741, 742, 743

☐ 1, 4, 7, 11

☐ 31, 30, 31, 30

☐ 741, 740, 742, 743

☐ 11, 7, 4, 1

☐ 34, 33, 32, 31

☐ 743, 742, 741, 740

☐ 1, 11, 14, 11

2 On Friday, 1 593 people watched a football match. On the following day, there were 1 624 people. On the Sunday, there were 1 586 people. List the numbers from smallest to largest.

3 Can a number ever be both greater than and less than another number? Why or why not? Use an example.

4 Use the digits 3, 2 and 7 to make 6 different numbers. Order them from smallest to largest.

Teacher Resource DVD

The Teacher Resource DVD is found at the back of each Overview and Implementation Guide. For year 4, the DVD includes planning and recording documents, VLBs, diagnostic assessments and Differentiated Worksheets for years 3, 4 and 5. This allows for differentiation in a multi-age or multi-ability classroom.

Teachers search by year level for the component they need. The VLBs, Diagnostic Pre- and Post-assessments and Differentiated Worksheets are in PDF format, allowing teachers to print these in sufficient quantities for their class. The planning and recording documents are Microsoft® Excel® spreadsheets that can be edited and tailored to teachers' requirements.

Interactive Whiteboard DVD

The Interactive Whiteboard DVD for year 4 contains the Visual Learning Animations and Bridges for year 4, as well as Tools4Maths.

Teachers introduce each lesson to students through the Visual Learning Animation (VLA) on this DVD. Each lesson then begins with a focus on conceptual understanding through use of the Visual Learning Bridge provided on this DVD and in the Student Activity Books.

Tools4Maths can be used in any number of ways: alongside the Digital Cards in the Activity Zone, as a tool for further explanation or enrichment in whole-class, small-group or individual work, or as individual or group extension activities.

The enVision Digital Cards provide structured formats for students to use Tools4Maths. Students can then explore each of the 11 digital tool sets on their own. The tools themselves are neither structured in any order nor related to specific activities, and so provide any number of opportunities for discovery within different mathematics contexts.

Student Activity Book

Students practise the mathematical concept in their Student Activity Book (SAB). This SAB is also a reference book where older students can independently teach themselves using the Visual Learning Bridges.

Lesson Pages

Topic and Lesson Identifier: allows students to easily locate and identify specific lessons.

Understand it!: shows the basic understanding that will be mastered by the lesson.

Visual Learning Bridge (VLB): the visual representation of the mathematical concept being addressed in each lesson. This VLB should form the starting point of the lesson and can be referred to at anytime throughout the lesson to reinforce the concept.

Independent Practice: designed as practice for students once they have mastered the basic concepts. As some students will reach this level earlier than others, this practice section can be used for differentiated learning in the classroom.

Topic
7
Lesson
1

Understand it!

Divide to find the number of equal groups and the number in each group.

Using Diagrams to Divide

When do you divide?

A museum wants to display a collection of 24 gems on four shelves, placing the same number of gems on each shelf. How many gems will be on each shelf?

Choose an Operation Think about sharing. Divide to find the number in each group.

24 gems on 4 shelves

What You Show

Think of sharing the gems equally among the 4 shelves. How many gems are on each shelf?

What You Write

$$24 \div 4 = 6$$

Each shelf should have 6 gems.

Mental Computation

Use repeated subtraction to find the quotient.

1 $40 \div 8 = \square$ 2 $70 \div 10 = \square$ 3 $36 \div 6 = \square$

Guided Practice

Complete the diagrams to help you divide. Draw pictures to help if you need to.

- 4 Kevin is arranging 12 chairs in 3 equal groups. How many chairs are in each group?

- 5 Megan has bracelets made up of 36 beads. Each bracelet has 9 beads. How many bracelets does she have?

Reasoning

- 6 Explain how you could use repeated addition to check the answer to the example at the top of the page.

Independent Practice

Draw pictures to help you divide.

- 7 The photographer put 18 people into 3 rows. How many people are in each row?

- 8 Rick is putting 14 drawings into 2 art binders. How many drawings are in each binder?

Problem Solving

- 9a Jake has a collection of 48 football cards. He wants to stick them in a scrapbook in equal rows. What are his options? Draw diagrams to explain.

- b How many options would he have if he had 24 cards?

Reasoning: provides the opportunity for students to reinforce their understandings of concepts by explaining their reasoning.

Guided Practice: allows students to practise and work through the mathematical concepts with guidance from teacher, calculator use etc.

Mental Computation: provides the opportunity for mental maths practice directly related to the lesson.

The design of the questions allows for working-out space. Students should be encouraged to write or draw their maths thinking in these spaces.

Problem Solving: presents an open-ended problem related to the overall mathematical concept. This allows the concept to be practised and reinforced by interesting and challenging investigations.

Activity Zone

The class splits into ability groups to use the Activity Zone. This class set of investigations, mental computation, games and digital cards supports the learning of each topic and differentiates the curriculum. Providing ready-made resources that are topic-linked and differentiated saves time for teachers, engages students and is sound pedagogy across Australia. Students record their Activity Zone work in the Maths Thinking Skills Book.

enVision Investigations Cards

Placement of card identifiers: down the side and along the top for easy identification.

Investigation icon: identifies card as an investigation.

Question boxes: clearly identify the different questions.

enVision Investigations CARD A 4

Topic 4 Multiplication Concepts and Strategies

1 Investigate the height of the desks in your class. Demonstrate how you could use multiplication to work out the total height of all the desks.

2 Find out approximately how much your family spends on groceries each week. Using your multiplication skills, show how you could estimate how much your family might spend on groceries in a month or a year.

enVision Investigations CARD A 4

Topic 4 Multiplication Concepts and Strategies

3 Exercise books usually have lines ruled in blue. Measure the length of a line in your book. Use multiplication to work out the total length of the lines on one page.

4 At one school, the students planted a tree each year to represent their growth over the school years. Explore three different types of trees and how much they grow each year. Use multiplication to show how much each tree would have grown since you started school.

enVision Minds Cards

Strategy: presents the situation and problem.

Thought balloons: identifies what needs to be thought about.

Placement of card identifiers: down the side and along the top for easy identification.

enVision Minds icon: identifies card as a mental computation card.

Partner Talk: indicates clearly if a partner is needed.

Quiz: quick questions on the topic designed to be used by students in pairs.

enVision Minds CARD A STRATEGY 4

Topic 4 Multiplication Concepts and Strategies

Commutative Property (Multiplying in Any Order)

At the basketball lightning premiership, 24 schools enter teams in each of the four divisions. How many teams are there in total?

I can swap the order of the numbers around to make it easier to work out in my head. Changing the order in which I add or multiply numbers doesn't change the answer.

4 groups of 24 is easier to work out than 24 groups of 4.

$4 \times 24 = 96$

There were 96 teams entered in total.

How would I work this out in my head?

Use the Commutative Property to solve the following questions. Take turns to answer each question, and explain your thinking to your partner.

1 $47 \times 4 = ?$

2 $96 \times 2 = ?$

3 $138 \times 5 = ?$

4 $145 \times 3 = ?$

Make up a question for your partner to answer using the Commutative Property. Talk about two situations when you might use the Commutative Property in real life.

enVision Minds CARD A QUIZ 4

Topic 4 Multiplication Concepts and Strategies

Instructions

- Read each question to your partner and ask them to write each answer in their Maths Thinking Skills Book.
- Check if their answer is correct and ask them to place a ✓ or a ✗ beside their answer.
- Ask them to count the number of ticks and write the number in the 'Total' box at the bottom of their page.

| | | |
|----|--|-------------------|
| 1 | What is 4 times 4? | 16 |
| 2 | What is 3 multiplied by 4? | 12 |
| 3 | What multiple am I counting by: 3, 6, 9, 12, 15? | 3 |
| 4 | What number comes next in this counting pattern: 4, 8, 12, 16, 20? | 24 |
| 5 | What is the multiplication fact that is the same as $9 + 9 + 9 + 9$? | 4×9 |
| 6 | What is 10 multiplied by 6? | 60 |
| 7 | What are the factors of 12? | 1, 2, 3, 4, 6, 12 |

Multiplication Concepts and Strategies

Use:

- Go to the Counters tool.
- Click on the Options tab at the bottom of the screen.
- Click on the down arrow, twice and then click on the Hundred Chart icon.
- The following pop-up may appear on the screen:
Click **Yes** to continue and then click on the OK button.
- Click on green in the Paint palette and then click on the green Spot Paint icon in the menu at the bottom of the screen.
- Now click on the number 9 in the Hundred Chart. Count on nine, and click on 18. Count on another nine and click on 27. Your workspace should now look like this:
- Continue doing this until you reach the end of the Hundred Chart. Your workspace should now look like this:

enVision Digital **4**
Multiplication Concepts and Strategies

- Add together the digits of each of the numbers you have highlighted (e.g. for number 18 add the digits 1 and 8 to make 9). What do you notice?
- Now click on violet in the Paint palette and then click on the Highlight Box in the menu at the bottom of the screen. Click on every third number (the multiples of three) in the Hundred Chart. Your workspace should now look like this:

Follow-up tasks:
Explore the pattern formed on the Hundred chart when skip counting using other multiples of 3, such as 6 and 12. What do you notice about the numbers that are included? Explain the pattern to a partner. Does this pattern continue past 100? Does the same pattern occur if you count backwards from 100? What happens to the pattern if you start counting from a different starting point (e.g. 3)? Challenge your partner to explore the pattern formed when skip counting, using different numbers such as 7 and 9.

enVision Digital icon: identifies card as a digital activity card.

Screen shots show students what their work should look like at each stage.

Maths Thinking Skills Book

The Maths Thinking Skills Book acts as a student record/self-reflection journal for each year of the program. There is one book suitable for use in years 3, 4, 5 or 6 and another book suitable for use in years F, 1 or 2.

In these books, students are able to write and draw their own maths thinking. The pages are divided into different colours/sections corresponding to the Activity Zone cards, reflection questions and language presented in each topic.

The completed Maths Thinking Skills Book can form a record of that student's maths learning for the year, and can then be used as a self-reflection tool for students and to inform parents and teachers.

enVision Minds: Students record their results from the enVision Minds strategies and quizzes on these pages.

enVision Minds

enVision Minds
Strategies

enVision Minds
Quizzes

enVision Investigations: Students record their working out for their chosen investigation in these pages. The first few blue pages have questions to guide students, but as their investigation skills improve, students are able to work on the blank blue pages, setting out their answers in their own way.

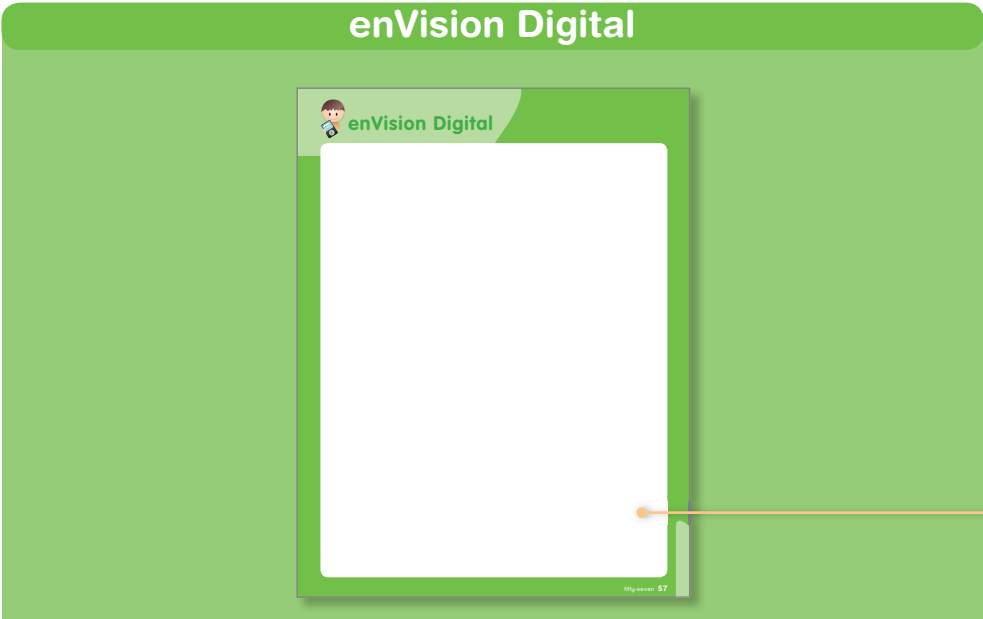

enVision Investigations

enVision Investigations
Unstructured

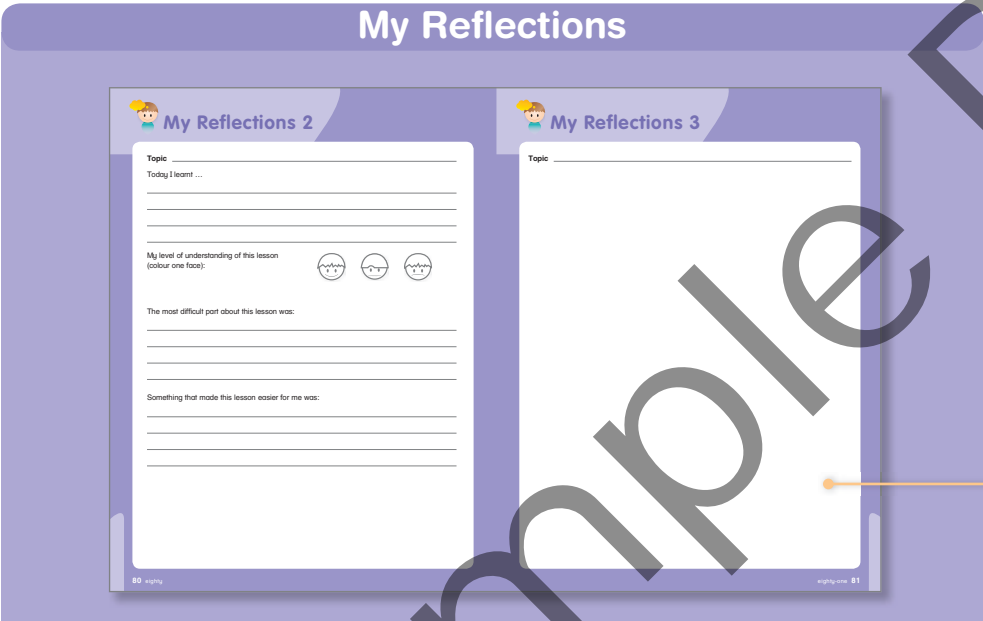

enVision Games: Students can record the strategies they use to play the games in these pages. They can also add their own ideas to an enVision game and record the ideas on these pages.

enVision Games

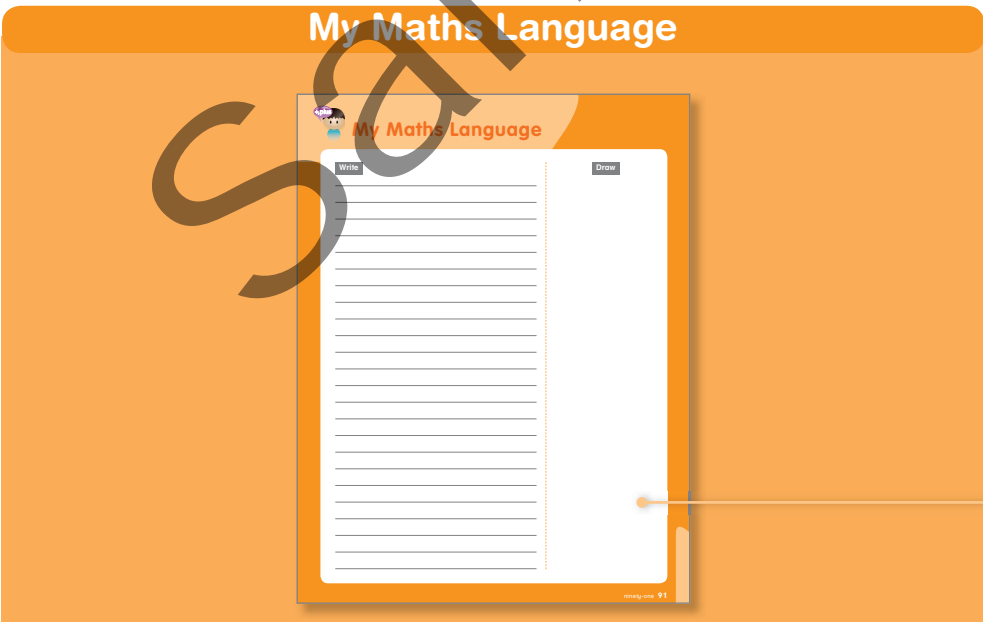

enVision Games
Ideas

enVision Digital: Students can print out the work they have done on the Digital Cards and paste it into these pages.

My Reflections: Students can record their reflections on their maths learning on these pages. These reflections may be the result of an end-of-lesson reflection activity or a class discussion.

My Maths Language: As students learn new maths language, they can record this vocabulary, together with any diagrams, on this page.

Overview of Assessment

Assessment should be more than merely a test at the end of instruction to see how students perform ... it should be an integral part of instruction that informs and guides teachers as they make instructional decisions. Assessment should not merely be done to students; rather it should also be done for students, to guide and enhance their learning.

NCTM, 2000, p. 22

The focus of assessment in **enVisionMATHS** is both formative and summative assessment. The formative assessment tools are used to determine students' achievements, resulting in action plans (for both you and the student) in the pursuit of further learning. The summative assessment tools are used to determine an overall measure of achievement at the end of a topic.

enVisionMATHS Assessment

The following assessment tools are available for **enVisionMATHS** topics in year 4.

Formative Assessment

Diagnostic Pre-assessment for each maths concept within the topic

This Pre-assessment helps to gauge the ability of students in a particular area of mathematics, providing information about their strengths and weaknesses. The results of this assessment will guide and support teachers in customising instruction for individual student needs. This form of assessment should be administered at the beginning of each topic. It covers both prerequisite material and new content.

Summative Assessment

Diagnostic Post-assessment for each maths concept within the topic

This Post-assessment provides teachers with information about students' achievement on a particular topic that has just been studied. These results help determine whether an individual student requires revision of, or intervention on, their topic. It also allows teachers to chart a students' progress from the beginning of the topic to the end and gives them information to report back to parents.

Topic 8 Patterns and Algebra Pre-assessment

Name

Concept 2: Predicting

1 Find what is missing.

a $4 + \text{something} = 7$. What is the missing number?
☐ 5 ☐ 4 ☐ 3 ☐ 2

b $5 \times \text{something} = 30$. What is the missing number?
☐ 5 ☐ 6 ☐ 7 ☐ 8

c 6, ..., 18, 24
☐ 6 ☐ 12 ☐ 14 ☐ 2

2 Fill in the missing numbers.

| | | | | |
|-------------|---|---|---|---|
| | 4 | 5 | 6 | 7 |
| $\times 11$ | | | | |

3 What would the next picture look like? Why?

4 The cost of buying a 10-pack of movie tickets is \$80.00. Write an expression to work out how much each ticket costs. Use this to calculate how much 15 tickets would cost.

30 Topic 8

Topic 8 Patterns and Algebra Post-assessment

Name

Concept 2: Predicting

1 a What is a rule for the table?

| | Small | Medium | Large | X-Large |
|----------------|----------|----------|----------|----------|
| Suit Price (p) | \$112.00 | \$130.00 | \$148.00 | \$166.00 |
| After Discount | \$94.00 | \$112.00 | \$130.00 | \$148.00 |

☐ $p + 12$ ☐ $p - 12$ ☐ $p + 18$ ☐ $p - 18$

b There are 58 songs on Yasmin's play list. If m represents the number of rock songs, which expression represents the number of other songs?
☐ $58 + m$ ☐ $58 - m$ ☐ $58 \times m$ ☐ $58 \div m$

c Coach Kim needs to form teams that all have the same number of players. The table shows the number of teams formed for different numbers of players.

| Number of Players | 24 | 32 | 40 | 72 |
|-------------------|----|----|----|----|
| Number of Teams | 3 | 4 | | 9 |

What rule can be used to find how many teams are formed if there are 40 players?
☐ Divide by 8 ☐ Divide by 6 ☐ Subtract 21 ☐ Multiply by 6

2 Complete the table.

| Score | 52 | 45 | 32 | 28 |
|----------------|----|----|----|----|
| Affected Score | 43 | 36 | 23 | |

3 What is the rule? What is the missing number? Explain how you worked it out.

| | 123 | 138 | 178 | 209 |
|--|-----|-----|-----|-----|
| | | 138 | 153 | 224 |

4 Write an expression to represent the number of chairs c in a restaurant that has 8 chairs per table t . If there are 15 tables, what is the total number of chairs?

34 Topic 8

The diagnostic assessments for year 4 are found in the year 4 Teacher Resource Booklets, and also on the year 4 Teacher Resource DVD. While teachers may wish to simply photocopy and administer each assessment as it appears in the Teacher Resource Booklet, the DVD format allows teachers to select and print appropriate Pre- and Post-assessments for any year 4 concept. Assessments for years 3 and 5 are also provided on the year 4 DVD to allow for differentiated tests to suit individual students. Answers are provided at the back of each Teacher Resource Booklet.

Concepts for Assessment

The following table lists the maths concepts used in the Diagnostic Pre-assessments and Post-assessments for year 4 level.

| Topic | Concept |
|--|---|
| 1 Number and Place Value | 1 Thousands 2 Larger Numbers 3 Comparing and Ordering |
| 2 Addition Concepts and Strategies | 1 Mental Maths 2 Models for Adding 3 Addition of Larger Numbers 4 Diagrams for Adding |
| 3 Subtraction Concepts and Strategies | 1 Models and Hundred Charts 2 Subtracting 2- and 3-digit Numbers 3 Subtracting with Zeroes 4 Word and Money Problems |
| 4 Multiplication Concepts and Strategies | 1 Using Arrays to Multiply 2 Multiplication Mentally 3 Multiply with Any Number 4 Multiply with 10s |

| 12 Data, Graphs and Probability | 1 Bar Graphs and Pie Charts 2 Predicting and Recognising Data 3 Related and Independent Events |

Overview of Assessment

Assessment Formats

Each of the diagnostic assessments incorporates a range of assessment styles. Different approaches to, and formats for, assessment are required to measure the mathematical knowledge, skills and attitudes of students.

Multiple-choice (Question 1)

Multiple-choice assessment is helpful in implementing a quick and practical assessment task for students. These tests measure students' levels of mathematical fluency and allow for a quick and direct opportunity for identifying strengths and weaknesses in students' maths ability. The multiple-choice style of assessment also reflects that which is used for NAPLAN at years 3, 5, 7 and 9.

Short Answer (free-response) (Question 2)

Free-response assessment helps to eliminate students guessing the correct answer. Students answer a question and may have the opportunity to represent their answer pictorially.

These questions can be more open-ended but should not be too wordy as they could restrict some students' access to maths learning due to language barriers.

Reasoning (Question 3)

Included in each Diagnostic Assessment is an open-ended question designed to measure students' reasoning ability. Students' reasoning includes their capacity for logical thought and actions such as analysing, proving, evaluating, explaining, inferring, justifying and generalising. The reasoning questions ask students to demonstrate their level of understanding by explaining the thinking behind their choices. This allows teachers to elicit a wealth of information about students' reasoning, making it possible to identify misconceptions and inconsistencies. It allows teachers to identify emerging ideas in students' thinking so they can be clarified, shared and formalised.

Problem Solving (Question 4)

Problem-solving assessment allows students to demonstrate their problem-solving skills by applying various mathematical problem-solving techniques to non-routine problems. Students are assessed on how they organise information, decode graphic representations, make generalisations and justify conclusions from data.

The problem-solving assessment questions appear together at the end so students are challenged to think about which maths tools or processes they need to apply to formulate their answers.

During a Lesson

Topic
8

Lesson
3

Topic Focus

Relationships can be described and generalisations made for mathematical situations that have numbers or objects that repeat in predictable ways. For some relationships, mathematical expressions and equations can be used to describe how members of one set are related to members of a second set.

Quick and Easy Lesson Overview

Objective

Students will extend patterns of cubes or tiles.

Essential Understanding

Some sequences of geometric objects change in predictable ways that can be described using a mathematical rule.

Materials

grid paper cubes or blocks

Maths Background for Teachers

Some geometric patterns are growing patterns. In the pattern below, for example, the first figure is a square. Then rows of squares are added repeatedly to form the subsequent figures.

As each row is added, the total number of squares increases. So there is a numerical aspect to this pattern that can be recorded in a table as follows.

| Rows | 1 | 2 | 3 | 4 |
|---------|---|---|---|----|
| Squares | 1 | 4 | 7 | 10 |

The numbers in the second row of this table form a number sequence. A rule for this sequence is 'add 3'. By continuing the sequence, it is possible to find how many squares are in subsequent figures without actually drawing them. So a figure with five rows would have 13 squares, a figure with six rows would have 16 squares and so on.

In this lesson students will use tables like the one above to relate geometric patterns and number patterns.

Set the Purpose

In this lesson you will learn to continue a geometric pattern and then use that pattern to complete a table of number pairs.

Differentiated Worksheets

Along with the differentiated worksheets, provide access for students to use place-value blocks, hundred charts and open number lines. Allow students to explore patterns by modelling them.

Replay

Describe Geometric Patterns Using a Table

Like number patterns, geometric patterns can have shapes that grow. To extend geometric patterns, follow these steps as you would for number patterns.

Below is a pattern of squares.

Step 1: Look at the pattern. See how the shape has changed. Each shape is made of 1 square in the first row, 2 squares in the second row, and 3 squares in the third row. Each shape grows by 2 squares.

Step 2: Make the next two shapes. Fill in the table.

| Number of Rows | 1 | 2 | 3 | 4 | 5 |
|-------------------|---|---|---|----|----|
| Number of Squares | 1 | 4 | 7 | 10 | 13 |

Check students' drawings.

Step 3: Use the table to find the number of squares in the next two shapes. Use grid paper to draw the next two shapes. Write the number of squares in the table.

| Number of Rows | 1 | 2 | 3 | 4 | 5 |
|-------------------|---|---|---|----|----|
| Number of Squares | 1 | 4 | 7 | 10 | 13 |

16: 20

20: 25

3. If there were 10 squares in a shape, how many blocks would there be? Explain. There would be 40 blocks since $4 \times 10 = 40$.

Connect

Have you ever made towers with blocks? How do you make storeys? [Stack blocks on top of other blocks.]

Explore the Concept

Stella begins a tile pattern with a yellow tile and will put five blue tiles after each yellow tile. If she uses 20 blue tiles, then how many yellow tiles will she use? (Hint: Draw a picture.)

Provide grid paper and yellow and blue crayons or felt pens so that students can sketch Stella's pattern.

[Four yellow tiles.]

Error Intervention

If students have trouble knowing how to start and recognise a pattern, then ask questions to help them get started: What do you have to find? How many are in what you are looking at? How many are next in the pattern?

Extension

Ask students what pattern they see in the towers image below.

[Where there is one more storey, there is one more cube.] Draw the next two patterns and develop a table to represent this.

Small-group Interaction

Work with a small group who may need further instruction, practice or extension. Use blocks, counters and other concrete materials; review the VLA with students; make further connections to real life; or look at one of the Investigations together. Other students work in groups on learning centre activities from the Activity Zone (Minds, Investigations, Games and Digital activity cards; see pages 6–11 of this booklet). Students will record their findings in their Maths Thinking Skills Book.

Reflection

In this lesson you learnt how to continue a geometric pattern and then use that pattern to complete a table of number pairs. How would you describe a geometric pattern?

Error Intervention: Prevents misconceptions.

Small Group Interaction: Results are recorded to use in assessment as required.

Differentiated Worksheets: Can be used in class or as homework to assist in assessing students' understanding.

Practice

Describe Geometric Patterns Using a Table

Draw the next two shapes in the pattern. Find the missing numbers in each table.

1. Number of Storeys: 1, 2, 3, 4, 5. Number of Blocks: 1, 4, 7, 10, 13.

2. Number of Storeys: 1, 2, 3, 4, 5. Number of Blocks: 1, 4, 7, 10, 13.

3. Length of Each Side: 1, 2, 3, 4, 5. Area of Each Side: 1, 4, 9, 16, 25.

4. Number of Storeys: 1, 2, 3, 4, 5. Number of Blocks: 1, 4, 7, 10, 13.

5. Use Exercise 4. How could you tell how many blocks there were in 20 storeys? How many blocks would there be? Multiply the number of blocks in one storey by the number of storeys. $20 \times 6 = 120$.

6. Which is a rule for the table below?

| Number of Storeys | 1 | 2 | 3 | 4 | 5 |
|-------------------|---|---|---|----|----|
| Number of Blocks | 1 | 4 | 9 | 16 | 25 |

A. Add 4.
B. Multiply by 2.
C. Multiply by 4.
D. Add 5.

Challenge

Pattern Teasers

Below is a pattern made of cubes called 'garages'.

| Garage | 1 | 2 | 3 | 4 | 5 |
|-----------------|---|---|---|----|----|
| Number of Cubes | 1 | 4 | 7 | 10 | 13 |

1. Continue the pattern for 6 garages. How many cubes would there be? 20 cubes.

2. How many cubes would be used to make 10 garages? 32 cubes.

3. Write an expression for the number of cubes for any number of garages. Use n for any number. $3n + 1$.

Here is a number pattern called 'bullseyes'. Use the pattern for Questions 4 and 5.

| Bullseye | 1 | 2 | 3 | 4 | 5 |
|-------------------|---|---|---|----|----|
| Number of Squares | 1 | 4 | 9 | 16 | 25 |

4. Start with the 2 in the upper left-hand corner. Draw a straight line across the first 2 numbers, 2, 5. Continue the line across the next three numbers, 2, 4, 6. Now draw a line down from the 6. What are the next 4 numbers? 2, 4, 6, 8.

5. Draw one continuous line that connects each number only once to complete the pattern. Why do you think 'bullseye' is the name for this pattern? The pattern results in a square bull's eye.

Overview of Assessment

Problem Solving

Students demonstrate their problem-solving skills by applying various mathematical techniques to non-routine problems. Students are assessed on how they organise information, decode graphic representations, make generalisations and justify conclusions from data.

Topic 2

Lesson 4

Understand it!
The sum of three or more numbers can be found using the same rules as for two numbers.

Adding Three or More Numbers

How can you use addition to solve problems?

Different kinds of birds are for sale at a pet shop. How many birds are for sale in total?

Find $137 + 155 + 18$.

Estimate: $140 + 160 + 20 = 320$

Parrots 18

Canaries 137

Parakeets 155

Step 1
Line up ones, tens and hundreds.

$$\begin{array}{r} 137 \\ 155 \\ + 18 \\ \hline \end{array}$$

Step 2
Add the ones. Regroup.

$$\begin{array}{r} 2 \\ 137 \\ 155 \\ + 18 \\ \hline 0 \end{array}$$

Step 3
Add the tens. Regroup.

$$\begin{array}{r} 12 \\ 137 \\ 155 \\ + 18 \\ \hline 10 \end{array}$$

Step 4
Add the hundreds.

$$\begin{array}{r} 12 \\ 137 \\ 155 \\ + 18 \\ \hline 310 \end{array}$$

310 birds are for sale in total.

Guided Practice
Find the sum of these numbers.

1
 $\begin{array}{r} 36 \\ 47 \\ + 35 \\ \hline \end{array}$

2
 $\begin{array}{r} 247 \\ 362 \\ + 49 \\ \hline \end{array}$

3
 $\begin{array}{r} 273 \\ 82 \\ + 125 \\ \hline \end{array}$

4
 $\begin{array}{r} 59 \\ 56 \\ 302 \\ + 24 \\ \hline \end{array}$

5
 $\begin{array}{r} 46 \\ 24 \\ 9 \\ + 7 \\ \hline \end{array}$

6
 $\begin{array}{r} 385 \\ 97 \\ + 34 \\ \hline \end{array}$

Independent Practice
Find the sum of these numbers.

10
 $\begin{array}{r} 64 \\ 42 \\ + 88 \\ \hline \end{array}$

11
 $\begin{array}{r} 307 \\ 37 \\ + 234 \\ \hline \end{array}$

12
 $\begin{array}{r} 602 \\ 125 \\ + 231 \\ \hline \end{array}$

13
 $\begin{array}{r} 246 \\ 54 \\ 233 \\ + 205 \\ \hline \end{array}$

14
 $\begin{array}{r} 303 \\ 128 \\ 63 \\ + 149 \\ \hline \end{array}$

Reasoning

7 Meg said that $95 + 76 + 86$ is greater than 300. Explain why her answer is not reasonable.

Look at the example at the top of the page.

8 Why is there a 2 above the tens place in Step 2?

9 How can you tell that 310 birds is a reasonable answer?

Problem Solving

15a Three friends collected a total of 300 coins to raise money to buy new sports equipment for their school. Each collected a different number of coins. How many coins might each have collected?

b What if they each collected about the same number of coins? How many coins would they each have collected?

Answers and discussion of Problem-solving questions are shown on the corresponding Teacher Resource Booklet page.

Adding Three or More Numbers

Student Activity Book Pages

When we estimated the sum, why did we round to the nearest ten? [Since 18 is a 2-digit number it makes sense to round all the numbers to the nearest ten.] Is there another way we could have estimated? [Yes; sample answers: $100 + 200 + 20 = 320$ or $140 + 150 + 20 = 310$.] How do the estimated sums compare? [All estimates should be reasonably close.]

Prevent Misconceptions

When helping students to practise rounding, make sure they understand that rounding to the nearest place will give a better estimate.

In Step 3, why are there two small numbers above the main numbers?

[They show that 20 ones were regrouped as 2 tens and that 10 tens were regrouped as 1 hundred.] In Step 4, why is no regrouping needed? [There are fewer than 10 hundreds.]

Understand it!
The sum of three or more numbers can be found using the same rules as for two numbers.

Visual Learning Bridge (VLB)

Adding Three or More Numbers

How can you use addition to solve problems?

Different kinds of birds are for sale at a pet shop. How many birds are for sale in total?

Find $137 + 155 + 18$.

Estimate: $140 + 160 + 20 = 320$

Step 1

Line up ones, tens and hundreds.

$$\begin{array}{r} 137 \\ 155 \\ + 18 \\ \hline \end{array}$$

Step 2

Add the ones. Regroup.

$$\begin{array}{r} 137 \\ 155 \\ + 18 \\ \hline 0 \end{array}$$

Step 3

Add the tens. Regroup.

$$\begin{array}{r} 137 \\ 155 \\ + 18 \\ \hline 10 \end{array}$$

Step 4

Add the hundreds.

$$\begin{array}{r} 137 \\ 155 \\ + 18 \\ \hline 310 \end{array}$$

310 birds are for sale in total.

Guided Practice

Find the sum of these numbers.

| | | | | | |
|---|---|---|--|--|--|
| 1 | 2 | 3 | 4 | 5 | 6 |
| $\begin{array}{r} 36 \\ 47 \\ + 35 \\ \hline 118 \end{array}$ | $\begin{array}{r} 247 \\ 362 \\ + 49 \\ \hline 658 \end{array}$ | $\begin{array}{r} 273 \\ 82 \\ + 125 \\ \hline 480 \end{array}$ | $\begin{array}{r} 59 \\ 56 \\ 302 \\ + 24 \\ \hline 441 \end{array}$ | $\begin{array}{r} 46 \\ 24 \\ 9 \\ + 7 \\ \hline 86 \end{array}$ | $\begin{array}{r} 385 \\ 97 \\ + 34 \\ \hline 516 \end{array}$ |

Reasoning

7 Meg said that $95 + 76 + 86$ is greater than 300. Explain why her answer is not reasonable.

Answers will vary. Rounding up to estimate gives $100 + 80 + 90 = 270$, which is less than 300, so Meg's answer is not reasonable.

Look at the example at the top of the page.

8 Why is there a 2 above the tens place in Step 2?

The ones added to 20 and were regrouped to 2 tens.

9 How can you tell that 310 birds is a reasonable answer?

Answers will vary. The estimate was 320, and 310 is reasonably close to this.

Independent Practice

Find the sum of these numbers.

| | | | | |
|---|---|--|--|--|
| 10 | 11 | 12 | 13 | 14 |
| $\begin{array}{r} 64 \\ 42 \\ + 88 \\ \hline 194 \end{array}$ | $\begin{array}{r} 307 \\ 37 \\ + 234 \\ \hline 578 \end{array}$ | $\begin{array}{r} 602 \\ 125 \\ + 231 \\ \hline 958 \end{array}$ | $\begin{array}{r} 246 \\ 54 \\ 233 \\ + 205 \\ \hline 738 \end{array}$ | $\begin{array}{r} 303 \\ 128 \\ 63 \\ + 149 \\ \hline 643 \end{array}$ |

Problem Solving

15a Three friends collected a total of 300 coins to raise money to buy new sports equipment for their school. Each collected a different number of coins. How many coins might each have collected?

Answers will vary.

b What if they each collected about the same number of coins? How many coins would they each have collected?

300 divided by 3 is 100, so if each friend collected about the same number then each would have collected about 100.

Problem Solving

15a There are many possibilities; responses will vary and show students' level of thinking. How did students go about solving this problem and how did they record their responses. Who used a systematic approach? For example:

| Friend 1 | Friend 2 | Friend 3 |
|----------|----------|----------|
| 11 | 91 | 198 |
| 12 | 92 | 196 |
| 13 | 93 | 194 |

b The average of 300 is 100; so if each friend collected about the same number of coins, then each would have to have collected about 100. Did students start from here, then use number sense to work out some possibilities?

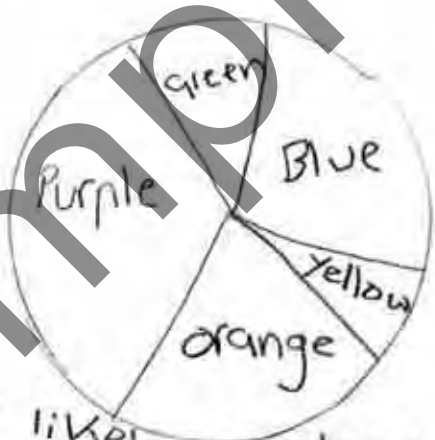

Self-assessment: Maths Thinking Skills Book

A record of each student's maths thinking can be recorded in the various sections of the Maths Thinking Skills Book. This includes self-assessment through reflection activities that are suggested in each lesson topic.

 **My Reflections 3**

Topic Probability

Today I learnt words about chance.
The event is likely if it might happen.
If the event is unlikely it probably won't happen.

- It is more likely to land on purple.
- It is impossible to get Red.

Year 6

Number and Algebra

13.4 Using Written Methods to Subtract 2-Digit Numbers
13.5 Using Other Mental Strategies to Subtract
13.6 Using Addition to Check Subtraction
13.7 Solving Two-step Problems

7.5 Using Inverse Operations
7.6 Using Multiplication Facts to Find Division Facts
7.7 Using Mental Maths to Divide
7.8 Dividing Multiples of 10, 100 and 1 000
7.9 Dividing With 2-Digit Numbers
7.10 Dividing With Remainders
8.1 Looking for a Pattern
8.2 Looking for a Pattern to Solve a Problem
8.5 Working Backwards to Solve Problems
8.7 Finding Equality

11.1 Dividing a Whole into Equal Parts
11.2 Writing Fractions of a Whole
11.3 Naming Groups Using Fractions
11.4 Finding Equivalent Fractions
11.5 Finding a Fraction of a Group
11.6 Explaining Fractions

9.1 Using Fractions to Name Parts of Wholes or Sets
9.2 Writing a Maths Explanation
9.3 Finding Equivalent Fractions
9.4 Finding More Equivalent Fractions
9.5 Defining Fractions
9.6 Using Improper Fractions and Mixed Numbers
9.7 Representing Tenths and Hundredths as Decimals
9.8 Writing Fractions and Decimals

1.4 Representing Decimals in Different Ways
1.5 Comparing Decimals
1.6 Comparing and Ordering Decimals
1.7 Ordering Decimals on a Number Line
1.8 Writing Fractions as Decimals—Tenths
1.9 Writing Fractions as Decimals—Hundredths
1.10 Ordering Fractions on a Number Line
1.11 Ordering Fractions and Decimals on a Number Line
1.12 Extending Beyond Hundredths
3.1 Writing Fractions and Decimals
3.2 Using Number Lines to Represent Fractions and Decimals
3.3 Comparing Fractions
3.4 Finding Equivalent Fractions
3.5 Ordering Mixed Numbers and Decimals on a Number Line
3.6 Asking Questions to Solve Multiple-Step Problems

1.4 Using Decimals
1.5 Understanding Decimal Place Value
1.6 Comparing and Ordering Decimals
1.7 Multiplying and Dividing by 10, 100 and 1 000
3.2 Estimating Sums and Differences
3.3 Multiplying Decimals by 10, 100 or 1 000
3.4 Multiplying Decimals
3.5 Dividing Decimals by 10, 100 or 1 000
3.6 Using Models and Number Lines to Add and Subtract Decimals
3.7 Adding and Subtracting Decimals
3.8 Multiplying a Whole Number by a Decimal
3.9 Dividing a Decimal by a Whole Number
5.1 Expressing a Fraction as a Whole Number
5.2 Representing Fractions in Different Ways
5.3 Using Fractions to Represent Division
5.4 Using Models to Compare Fractions
5.5 Finding Equivalent Fractions

Number and Algebra

- 4.4 Multiplying in Any Order
- 4.5 Solving Multiplication Problems in Two Steps
- 4.8 Multiplying 2-Digit by 1-Digit Numbers
- 4.9 Multiplying by Multiples of 10 and 100
- 7.1 Using Diagrams to Divide
- 7.2 Using a Table to Show Division
- 7.3 Using Materials to Divide 2-Digit Numbers
- 7.6 Using Multiplication Facts to Find Division Facts
- 7.7 Using Mental Maths to Divide
- 7.8 Dividing Multiples of 10, 100 and 1000
- 7.9 Dividing With 2-Digit Numbers
- 7.10 Dividing With Remainders
- 8.1 Looking for a Pattern
- 8.2 Looking for a Pattern to Solve a Problem
- 8.3 Describing Geometric Patterns Using a Table
- 8.4 Using Expressions to Find Missing Numbers
- 8.5 Working Backwards to Solve Problems
- 8.6 Using Multiplication and Division Expressions
- 8.7 Finding Equality
- 8.8 Identifying Equal or Unequal Number Sentences
- 10.6 Understanding Temperature

- 4.7 Using Equivalent Number Sentences
- 5.2 Using Patterns to Divide
- 5.3 Dividing 3-Digit by 1-Digit Numbers
- 5.4 Dividing Using Zeroes
- 5.5 Understanding Remainders
- 5.6 Dividing with Remainders
- 5.8 Checking for Reasonableness in Division Problems
- 7.1 Using Models to Add Fractions
- 7.2 Using Models to Subtract Fractions
- 7.3 Adding and Subtracting Fractions with Like Denominators
- 7.4 Adding Mixed Numbers with Like Denominators
- 10.1 Using Patterns to Show Relationships
- 10.2 Making a Table to Show Patterns
- 10.3 Working Backwards to Solve Problems

- 6.6 Drawing a Diagram to Solve an Equation
- 6.7 Understanding Properties of Equality
- 6.8 Solving Addition and Subtraction Equations
- 6.9 Creating Number Sequences Using Whole Numbers, Fractions and Decimals

Measurement and Geometry

- 4.1 Using Different Tools to Measure
- 4.2 Estimating and Measuring with Centimetres
- 4.3 Estimating and Measuring with Centimetres and Metres
- 4.4 Estimating and Measuring with Metres and Kilometres
- 4.5 Estimating and Measuring with Millilitres and Litres
- 4.6 Estimating and Measuring with Grams and Kilograms
- 4.7 Understanding Perimeter
- 4.8 Identifying Different Shapes with the Same Perimeter

- 10.1 Telling Time to the Minute
- 10.2 Relating Units of Time
- 10.3 Comparing Units of Time
- 10.4 Finding Elapsed Time
- 10.5 Working Backwards to Solve Time Problems
- 10.6 Understanding Temperature
- 11.1 Measuring with Formal Units of Length
- 11.2 Finding Perimeter
- 11.3 Identifying Different Shapes with Same Perimeter
- 11.4 Understanding Area

- 8.1 Finding Perimeter
- 8.2 Identifying Different Shapes with the Same Perimeter
- 8.3 Finding Area of Rectangles and Squares
- 8.4 Exploring Perimeter and Area of Rectangles
- 8.5 Solving Problems with Perimeter and Area
- 8.6 Measuring Units of Capacity
- 8.7 Understanding Units of Mass
- 8.8 Measuring Volume
- 11.1 Finding Elapsed Time

- 2.6 Finding Elapsed Time
- 9.1 Finding Perimeter
- 9.2 Converting Measurements
- 9.3 Identifying Decimals in the Metric System
- 9.4 Finding Area of Irregular Shapes
- 9.5 Finding Surface Area
- 9.6 Finding Volume of a Prism
- 9.7 Finding Volume and Capacity of Rectangular Prisms
