

There are lots of living things around you.
The flowers and trees in a park are living
things. The insects, birds and dogs are
also living things.

Living things live in different places.
Some plants and animals live in the water.
Some live on the land. Some live up high, some live down low. The place where a plant or an animal lives is its **habitat**.

A wombat lives down low on the land.

A seagull lives up high.

This plant grows in the water.

A eucalypt tree grows up high.
